THIS PAGE BLANK (USPTO)

STIC-Biotech/ChemLib

199050

From: Li, Ruixiang
Sent: Monday, June 05, 2006 3:22 PM
To: STIC-Biotech/ChemLib
Subject: Sequence search of Application No.10/600,816

Please do a standard search on:

- (i). SEQ ID NO: 3 against amino acid databases;
- (ii). SEQ ID NOS: 2 and 30-33 against nucleic acid databases.

Thank you very much!

Ruixiang Li

Pred. No. is the number of results predicted by chance to have a score greater than or equal to the score of the result being printed, and is derived by analysis of the total score distribution.

PT New isolated antigenic peptides e.g., for G protein-coupled receptors

PT (GPCR), useful for diagnosing and designing drugs for treating conditions

in which GPCRs are involved, e.g. AIDS, Alzheimer's disease, cancer or autoimmune diseases.

Disclosure; Fig 1; 523pp; English.

The present invention describes antigenic peptides (I) comprising: (a) any one of 1601 sequences (see ABP2019 to ABP83619) of 12-24 amino acids. Also described: (1) an assay for the detection of a particular G protein-coupled receptor (GPCR) or a candidate polypeptide in a sample; and (2) an isolated antibody having high specificity and high affinity or avidity for a particular GPCR. (I) can be used as GPCR modulators and in gene therapy. The antigenic peptides for GPCRs are useful in detecting an antibody against a particular GPCR, and in the production of specific antibodies. The peptides and antibodies are also useful for detecting the presence or absence of corresponding GPCRs. The antigenic peptides for GPCRs and antibodies are useful for diagnosing and designing drugs for treating immune-related diseases, growth-related diseases, cell regeneration-related diseases, immunological-related cell proliferative diseases, or autoimmune diseases, e.g. AIDS, Alzheimer's disease, atherosclerosis, bacterial, fungal, protozoan or viral infections, osteoarthritis, osteoporosis, cancer, cardiomyopathy, chronic and acute inflammation, allergies, Crohn's disease, diabetes, graft versus host disease, Parkinson's disease, multiple sclerosis, pain, psoriasis, anxiety, depression, schizophrenia, dementia, mental retardation, memory loss, epilepsy, asthma, tuberculosis, obesity, nausea, hypertension, hypotension, renal disorders, rheumatoid arthritis, trauma, ulcers, or any other disorder in which GPCRs are involved. The antibodies may be used in immunoassays and immunodiagnosis. AB242523 to AB242869 encode GPCR proteins given in ABP81675 to ABP82018, which are used in the exemplification of the present invention

Determining the presence or absence of a pathological cell in a patient,
useful for diagnosing, prognosing or treating cancer, comprises detecting
a nucleic acid in a biological sample.

Claim 8; SEQ ID NO 619; 1385pp; English.

The invention relates to nucleic acids and proteins (ADN38683-ADN40064)
whose expression is upregulated or downregulated in specific cancers or
other diseases such as angiogenic or fibrotic disorders, and to methods
of determining the presence or absence of a pathological cell in a
patient by detecting a nucleic acid at least 80% identical to those of
the invention or by detecting a polypeptide of the invention. The
invention also relates to expression vectors and host cells comprising a
nucleic acid of the invention; antibodies which specifically bind a
polypeptide of the invention; use of such antibodies for drug targeting;
and methods of screening for modulators of activity or expression of the
polypeptides and nucleic acids. The nucleic acids, polypeptides,
antibodies and methods are useful for diagnosing, prognosing and treating
cancer and other conditions such as psoriasis, ischaemia, heart disease,
atherosclerosis, inflammatory diseases, autoimmune diseases, retinal
neovascularisation syndromes, scarring and uterine fibroids. They may
also be useful in wound healing and in contraception. The present
sequence represents a nucleic acid sequence of the invention.

XX      PT      New nucleic acid molecule encoding a human G-protein coupled receptor,
XX      PT      RAI3, useful for preventing, treating or ameliorating chronic obstructive
XX      PT      pulmonary disease (COPD), COPD-like disorder, or the underlying symptoms
XX      PT      of COPD.
XX      PS      Claim 1; SEQ ID NO 2; 301pp; English.
XX      CC      The present sequence is that of cDNA encoding a human G-protein coupled
XX      CC      receptor (Class C, Group 5), denoted retinoic acid induced 3 (RAI-3).
XX      CC      Proteomics methods were used to isolate cigarette smoke-inducible
XX      CC      tyrosine phosphorylated proteins from airway epithelial cells. RAI-3 was
XX      CC      identified as being tyrosine phosphorylated and/or as being
XX      CC      associated/complexed with tyrosine phosphorylated proteins only in those
XX      CC      cells that had been exposed to cigarette smoke. Since RAI-3 is primarily
XX      CC      expressed in lung tissue, and since cigarette smoke is a major causative
XX      CC      factor of chronic obstructive pulmonary disease (COPD), RAI-3 provides a
XX      CC      novel cellular target for identifying modulators, e.g. agonists or
XX      CC      antagonists, useful for the treatment and/or prevention of COPD and
XX      CC      related disorders such as emphysema and chronic bronchitis. RAI-3
XX      CC      compounds, e.g. agonists and antagonists, especially antisense
XX      CC      compounds, can be used to treat COPD and other disorders and diseases
XX      CC      associated with regulation of NF-kB and/or its associated or interacting
XX      CC      signaling molecules. Single nucleotide polymorphisms (SNPs) detected in
XX      CC      the RAI-3 gene are useful for determining COPD association in
XX      CC      individuals. RAI-3 nucleic acid molecules and polypeptides are useful for
XX      CC      preventing, treating or ameliorating disorders related to aberrant GPCR
XX      CC      signaling or cell cycle regulation, pulmonary disorders, inflammatory

PT Detecting pancreatic cancer-associated transcript in a biological sample,
PT useful for diagnosing or treating the disease, comprises contacting the
PT sample with a polynucleotide that selectively hybridizes to a specific
PT sequence.

XX Claim 7; SEQ ID NO 9; 263pp; English.

XX The present invention describes a method for detecting a pancreatic
XX cancer-associated transcript in a biological sample. The method comprises
XX contacting the biological sample with a polynucleotide that selectively
XX hybridizes to a sequence at least 80% identical to a sequence as shown in
XX any one of Tables 3 to 25 in the specification or having the GenBank
XX Accession Number AF279145. Also described: (1) diagnosing pancreatic
XX cancer in a human or animal subject being tested, determining the
XX likelihood that a subject having a pancreatic cancer will survive, or
XX determining the suitability of a subject having a pancreatic cancer for
XX surgical resection therapy; (2) detecting a pancreatic cancer-associated
XX polypeptide in a biological sample; (3) determining the likelihood that a
XX subject having a pancreatic cancer will survive; and (4) monitoring the
XX efficacy of a therapeutic treatment of pancreatic cancer. A pancreatic
XX cancer-associated transcript has cytostatic activity, and can be used in
XX gene and protein therapy. A pancreatic cancer-associated transcript

CC polynucleotide, a vector comprising the polynucleotide, an isolated
CC polypeptide or an antibody that binds to the isolated polypeptide can be
CC used for diagnosing or prognosing pancreatic cancer or for preparing a
CC medicament for the treatment of pancreatic cancer. The prognostic or
CC diagnostic methods are useful for the early detection of pancreatic
CC cancer or its metastases, and for monitoring the progress of disease such
CC as during remission or following surgery or chemotherapy. The present
CC sequence encodes human retinoic acid induced 3 (RAI3), which is used in
CC the exemplification of the present invention.

PT New tumor-associated antigenic target polypeptides and nucleic acids,
PT useful in preparing a medicament for treating or detecting a
PT proliferative disorder, e.g. breast, lung, colorectal, ovarian or

PT	prostate cancer or tumor.	
XX	Claim 1; SEQ ID NO 3498; 7273pp; English.	
PS	The invention relates to human tumour-associated antigenic target (TAT)	
XX	polypeptides, and their related nucleic acids. The TAT polypeptides are	
CC	overexpressed in cancer tissues compared to normal tissues, and may thus	
CC	serve as effective targets for the diagnosis and treatment of cancer in	
CC	mammals. The invention also relates to nucleic acid and polypeptide	
CC	sequences at least 80% identical to the TAT nucleic acids and	
CC	polypeptides; expression vectors and host cells comprising a TAT nucleic	
CC	acid; an antibody specific for a TAT polypeptide; a peptide or organic	
CC	molecule which binds to a TAT polypeptide; fusion proteins comprising a	
CC	TAT polypeptide; and methods and compositions for the treatment or	
CC	diagnosis of cancer in mammals. TAT polypeptides, nucleic acids,	
CC	antibodies, antagonists, binding molecules and compositions are useful	
CC	for diagnosing or treating a cell proliferative disorder associated with	
CC	increased TAT expression, particularly cancers, such as breast cancer,	
CC	colorectal cancer, lung cancer, ovarian cancer, liver cancer, bladder	
CC	cancer, pancreatic cancer, cervical cancer, cancers of the central	
CC	nervous system, melanoma and leukaemia. TAT nucleic acids may further be	
CC	used as hybridisation probes, in chromosome and gene mapping, in	
CC	chromosome identification and in gene therapy. The present sequence	
CC	represents a TAT nucleic acid of the invention

PS Claim 1; SEQ ID NO 350; 1381pp; German.

XX

XX

CC This invention relates to a novel isolated nucleic acid associated with

CC bronchial cancer comprising 489 defined sequences given in the

CC specification. The invention may be useful for the production of

CC compounds with a cytostatic activity through the inhibition of expression

CC or activity of tumour-associated proteins. The novel DNA sequences and

CC the proteins/peptides encoded by them are used for detecting bronchial

CC cancer or determining the risk of developing it and to screen for

CC specific binding partners of the DNA or protein sequences, where the

CC binding partners are potentially useful as agents for treating or

CC diagnosing bronchial cancer. The DNA or protein sequences can also be

CC used for prognosis, detection of metastases and for secondary treatment

CC (of tumours that have been stabilised or are no longer detectable).

CC Detecting abnormal expression of the DNA sequences provides early

CC diagnosis of bronchial cancers. The present sequence is that of a novel

CC bronchial cancer-associated human gene sequence of the invention.

PT Novel isolated antibody e.g. anti-E16 or anti-TAT112 antibody that binds
PT to tumor-associated antigenic target polypeptide, useful for diagnosing
XX or treating cancer.
PS Claim 1; SEQ ID NO 40; 96pp; English.
XX This invention relates to a novel isolated antibody, for example anti-E16
or anti-TAT112 antibody, that binds to a tumor-associated antigenic
target polypeptide (TAT) and that lacks an associated signal peptide
sequence. The invention may be useful for the development of compounds
with a cytostatic activity acting as antagonists of the TAT188
polypeptide or RNA interference whilst the disclosed sequences may be
useful for gene therapy. The invention is useful for inducing the death
of a cell (such as a cancer cell chosen from breast, colon, rectum,
endometrium, kidney, lung, ovary, skin and liver) to which it binds,
inhibiting proliferation or promoting cell death of a cell expressing
TAT188. In addition, the invention may be useful for detecting the level
of TAT188 polypeptide in a test cell relative to a control cell, or
treating or preventing a cell proliferative disorder associated with
increased expression of TAT188. The novel antibody of the invention is
useful for inhibiting the growth of a cancer cell and may be useful for
diagnosing or treating cancer. The present sequence is that of the human
TAT115 cDNA which encodes a protein against which an antibody of the
invention may be targeted.

PT Substance that suppresses expression of retinoic acid-inducible G-protein
PT coupled receptor-3 RA13 gene or nucleic acid, useful for suppressing cell
PT growth, and as pharmaceutical or therapeutic agent of breast cancer.
XX
PS Claim 1; SEQ ID NO 2; 22pp; Japanese.
XX
CC The invention relates to a novel substance which suppresses the
CC expression of a retinoic acid-inducible G-protein coupled receptor (RA1)3
CC gene. The RA13 gene suppressing agent is useful for suppressing cell
CC growth, and as a pharmaceutical or therapeutic agent of breast cancer.
CC and is also useful in identifying a cell growth inhibitory substance. The
CC RA13 gene suppressing agent enables the identification of a cell growth
CC inhibitory substance. This polynucleotide sequence represents the
CC retinoic acid-inducible G-protein coupled receptor 3 gene of the
CC invention.

XX Claim 21; SEQ ID NO 18; 301pp; English.
XX
XX The present sequence is that of cDNA encoding a human G-protein coupled
XX receptor (Class C, Group 5), denoted retinoic acid induced 3 (RAI-3).
XX Proteomics methods were used to isolate cigarette smoke-inducible

```

tyrosine phosphorylated proteins from airway epithelial cells. RAI-3 was identified as being tyrosine phosphorylated and/or as being associated/complexed with tyrosine phosphorylated proteins only in those cells that had been exposed to cigarette smoke. Since RAI-3 is primarily expressed in lung tissue, and since cigarette smoke is a major causative factor of chronic obstructive pulmonary disease (COPD), RAI-3 provides a novel cellular target for identifying modulators, e.g. agonists or antagonists, useful for the treatment and/or prevention of COPD and related disorders such as emphysema and chronic bronchitis. RAI-3 modulators, e.g. agonists and antagonists, especially antisense compounds, can be used to treat COPD and other disorders and diseases associated with regulation of NF-kB and/or its associated or interacting signaling molecules. Single nucleotide polymorphisms (SNPs) detected in the RAI-3 gene are useful for determining COPD association in individuals. RAI-3 nucleic acid molecules and polypeptides are useful for preventing, treating or ameliorating disorders related to aberrant GPCR signaling or cell cycle regulation, pulmonary disorders, inflammatory lung disorders, COPD, the underlying symptoms of COPD, COPD-related disorders or conditions, autoimmune disorders, disorders related to hyperimmune activity, inflammatory conditions, disorders related to aberrant acute phase responses, hypercongenital conditions, birth defects, necrotic lesions, wounds, organ transplant rejection, renal diseases, ischaemia-reperfusion injury, heart disorders, disorders related to aberrant signal transduction, proliferation disorders, cancers, HIV infection, asthma, cystic fibrosis, pulmonary fibrosis, ulcerative colitis, cerebral infarct, myocardial infarct, diabetic nephropathy, allergic rhinitis, Crohn's disease, atherosclerosis, rheumatoid arthritis, inflammatory/autoimmune disorders, glioblastoma, pulmonary small cell undifferentiated carcinoma, carcinoma of the breast, colon, lung, ovary, pancreas, prostate, non-Hodgkin's lymphoma, disorders associated with aberrant cell adhesion, I-CAM function and/or regulation, E-selectin function and/or regulation, or aberrant NF-kB function and/or regulation (all claimed).

PT New nucleic acid differentially expressed in pancreatic tumor tissue, for
PT use as diagnostic agents and in screening for therapeutic agents.
XX
PS Claim 1; SEQ ID NO 42; 28pp; German.
XX
CC The invention relates to a novel human nucleic acid sequence of the
CC pancreas and its encoded protein. The invention further comprises:
CC proteins and peptides, preferably isolated, that contain a sequence
CC encoded by the novel nucleic acid; and methods for diagnosis and
CC treatment of pancreatic cancer, using a substance that inhibits or binds
CC to the protein or its DNA, including: an antisense oligonucleotide, short
CC interfering RNA or ribozyme directed against the pancreatic protein, an
CC organic molecule, particularly having a molecular weight below 5000,
CC especially 300, that binds to the pancreatic DNA, an aptamer or
CC (monoclonal) antibody, preferably human or humanized, that binds to the
CC pancreatic DNA, or an anti-idiotypic antibody raised against the
CC monoclonal antibody, any of which may be derivatized with a reporter
CC group, cytotoxic compound, immunostimulant and/or radioisotope. The novel
CC human pancreatic proteins and their encoding DNA have cytostatic
CC activity. The novel sequences are useful for inhibiting transcription
CC and/or expression of genes and proteins associated with pancreatic
CC cancer. This polynucleotide sequence represents the DNA encoding one of
CC the novel human pancreatic proteins of the invention. Note: This sequence
CC is not shown in the specification, it has been electronically downloaded
CC from a DVD-rom provided with this specification by the European Patent
CC Office.

DR Claim 8; SEQ ID NO 12388; 2537pp + Sequence Listing; English.

XX The present invention describes primer sets for synthesizing 5602 full-length cDNAs defined in the specification. Where a primer set comprises: (a) an oligo-dr primer and an oligonucleotide complementary to the 5602 complementary strand of a polynucleotide which comprises one of the 5602 nucleotide sequences defined in the specification, where the oligonucleotide comprises at least 15 nucleotides; or (b) a combination of an oligonucleotide comprising a sequence complementary to the complementary strand of a polynucleotide which comprises a 5'-end sequence and an oligonucleotide comprising a sequence complementary to a polynucleotide which comprises a 3'-end sequence, where the oligonucleotide comprises at least 15 nucleotides and the combination of the 5'-end sequence/3'-end sequence is selected from those defined in the specification. The primer sets can be used in antisense therapy and in gene therapy. The primers are useful for synthesizing polynucleotides, particularly full-length cDNAs. The primers are also useful for the detection and/or diagnosis of the abnormality of the proteins encoded by the full-length cDNAs. The primers allow obtaining of the full-length cDNAs easily without any specialised methods. AAH03166 to AAH13628 and AAH13633 to AAH18742 represent human cDNA sequences; AAB92446 to AAB95893

CC represent human amino acid sequences; and AAH13629 to AAH13632 represent CC oligonucleotides, all of which are used in the exemplification of the present invention

PT a protein found in breast, lung, colon, or kidney tissue.
XX
PS Claim 2; SEQ ID NO 2; 220pp; English.

CC The present invention describes a method for diagnosing and treating a
CC cancer, e.g. breast, lung, colon, or kidney cancer. The method comprises
CC detecting and blocking the over expression of a gene of a protein found
CC in breast, lung, colon, or kidney tissue. Also described is an antibody
CC or binding portion of an antibody that specifically binds a protein found
CC in breast tissue, lung tissue, colon tissue, or kidney tissue. The
CC antibody has cytostatic activity, and can be used in gene therapy. The
CC methods, antibodies, polynucleotides and polypeptides from the present

CC invention are useful for detecting, diagnosing, preventing and treating
CC cancer, e.g. breast, lung, colon, or kidney cancer. The present sequence
CC represents a nucleotide sequence given in the present invention, which is
CC over expressed in human breast tumour tissue. N.B. All 385 sequences
CC referenced in this patent are detailed in the US provisional application
CC SN 60/447,900, filed 02/13/2003. In this application only one sequence,
CC representing the longest sequence of each of the 65 clones is listed in
CC Appendix A (and given as SEQ ID NO:1 to 65 in the Sequence Listing).

XX Novel receptors and associated proteins for diagnosis and treatment of neurological disorders, immunological disorders including autoimmune/inflammatory disorders and cell proliferative disorders such as cancer.

XX Disclosure; Page 111-112; 128pp; English.

XX The present sequence is a human RECAP (receptors and associated proteins) polypeptide. RECAP polynucleotides and polypeptides are useful in the diagnosis, treatment and prevention of neurological disorders such as

CC stroke, Alzheimer's disease, Pick's disease, Huntington's disease,
 CC dementia, Parkinson's disease, Down's syndrome, amyotrophic lateral
 CC sclerosis, multiple sclerosis, bacterial and viral meningitis, CJD
 CC (Creutzfeldt-Jakob disease), GSS (Gerstmann-Strausler-Scheinker
 CC syndrome); immunological disorders, including autoimmune/inflammatory
 CC disorders such as AIDS, Digeorge's syndrome, severe combined
 CC immunodeficiency disease (SCID), Chediak-Higashi syndrome, Cushing's
 CC disease, Addison's disease, autoimmune thyroiditis, Crohn's disease,
 CC diabetes mellitus, Good pasture's syndrome, gout, Grave's disease,
 CC Hashimoto's thyroiditis, Sjogren's syndrome, Werner's disease, vital,
 CC bacterial, fungal, parasitic, protozoal, and helminthic infections; and
 CC cell proliferation disorders such as arteriosclerosis, atherosclerosis,
 CC cirrhosis, hepatitis and cancer

 XX Primer sets for synthesizing polynucleotides, particularly the 5602 full-
 PT length cDNAs defined in the specification, and for the detection and/or
 PT diagnosis of the abnormality of the proteins encoded by the full-length
 XX cDNAs.
 PS Claim 8; SEQ ID NO 12389; 2537pp + Sequence Listing; English.
 XX
 CC The present invention describes primer sets for synthesizing 5602 full-
 CC length cDNAs defined in the specification. Where a primer set comprises:
 CC (a) an oligo-dT primer and an oligonucleotide complementary to the
 CC complementary strand of a polynucleotide which comprises one of the 5602
 CC nucleotide sequences defined in the specification, where the
 CC oligonucleotide comprises at least 15 nucleotides; or (b) a combination
 CC of an oligonucleotide comprising a sequence complementary to the
 CC complementary strand of a polynucleotide which comprises a 5'-end
 CC sequence and an oligonucleotide comprising a sequence complementary to a
 CC polynucleotide which comprises a 3'-end sequence, where the
 CC polynucleotide comprises at least 15 nucleotides and the combination of
 CC the 5'-end sequence/3'-end sequence is selected from those defined in the
 CC specification. The primer sets can be used in antisense therapy and in
 CC gene therapy. The primers are useful for synthesizing polynucleotides,
 CC particularly full-length cDNAs. The primers are also useful for the
 CC detection and/or diagnosis of the abnormality of the proteins encoded by
 CC the full-length cDNAs. The primers allow obtaining of the full-length
 CC cDNAs easily without any specialised methods. AAH03166 to AAH13628 and
 CC AAH13633 to AAH18742 represent human cDNA sequences; AAB92446 to AAB95893
 CC represent human amino acid sequences; and AAH13629 to AAH13632 represent
 CC oligonucleotides, all of which are used in the exemplification of the
 CC present invention

XX New G-protein coupled receptor-like retinoic acid induced gene 1 (GPCR-

PT like RAIG1) polypeptide and gene, useful for diagnosing or treating
PT metabolic disorders, e.g. obesity, anorexia, cachexia or diabetes.
XX Disclosure; Page 19-20; 150pp; English.

XX The present sequence is that of human G-protein coupled receptor-like
CC retinoic acid induced gene 1 (GPCR-like RAIG1) protein. This is the human
CC homologue of murine GPCR-like RAIG1 (see ABR42648). The murine GPCR-like
CC RAIG1 gene was shown to be differentially regulated during fasting-
CC feeding cycles, with moderate induction early in fasting, down-regulation
CC with extended fasting and 4-fold up-regulation with feeding in recovery
CC from fasting. The differentially expressed gene, its mRNA, and the
CC encoded protein, can each be manipulated to detect and treat metabolic
CC disorders associated with up- or down-regulation of GPCR-like RAIG1
CC activity, such as obesity, anorexia, cachexia or diabetes

New isolated antigenic peptides e.g., for G protein-coupled receptors (GPCR), useful for diagnosing and designing drugs for treating conditions in which GPCRs are involved, e.g. AIDS, Alzheimer's disease, cancer or autoimmune diseases.
Disclosure; Fig 1; 523pp; English.
The present invention describes antigenic peptides (I) comprising: (a) any one of 1601 sequences (see ABP82019 to ABP83619) of 12-24 amino acids. Also described: (1) an assay for the detection of a particular G protein-coupled receptor (GPCR) or a candidate polypeptide in a sample; and (2) an isolated antibody having high specificity and high affinity or avidity for a particular GPCR. (1) can be used as GPCR modulators and in gene therapy. The antigenic peptides for GPCRs are useful in detecting an antibody against a particular GPCR, and in the production of specific antibodies. The peptides and antibodies are also useful for detecting the presence or absence of corresponding GPCRs. The antigenic peptides for GPCRs and antibodies are useful for diagnosing and designing drugs for treating immune-related diseases, growth-related diseases, cell regeneration-related disease, immunological-related cell proliferative diseases, or autoimmune diseases, e.g. AIDS, Alzheimer's disease, atherosclerosis, bacterial, fungal, protozoan or viral infections, osteoarthritis, osteoporosis, cancer, cardiomyopathy, chronic and acute inflammation, allergies, Crohn's disease, diabetes, graft versus host disease, Parkinson's disease, multiple sclerosis, pain, psoriasis, anxiety, depression, schizophrenia, dementia, mental retardation, memory loss, epilepsy, asthma, tuberculosis, obesity, nausea, hypertension, hypotension, renal disorders, rheumatoid arthritis, trauma, ulcers, or any other disorder in which GPCRs are involved. The antibodies may be used in immunoassays and immunodiagnosis. AB242523 to AB242869 encode GPCR proteins given in ABP81675 to ABP82018, which are used in the exemplification of the present invention

PS Claim 1; Fig 1; 43pp; English.
XX
CC This sequence represents retinoic acid-inducible gene 1 (RAIG1)
CC polypeptide. RAIG1 is an orphan G-protein coupled receptor (GPCR) located
CC on chromosome 12. RAIG1 shows a restricted expression pattern compared to
CC a related receptor, GPCR5B, which is widely expressed in peripheral and
CC central tissues. The RAIG1 cDNA and polypeptide sequence may be used in
CC the method of the invention for screening for and/or diagnosis of carcinoma
CC carcinoma in a subject, and/or monitoring the effectiveness of carcinoma
CC therapy. The method comprises detecting and/or quantifying in a
CC biological sample obtained from the subject an RAIG1 polypeptide and a
CC nucleic acid molecule. The RAIG1 polypeptide and nucleic acid molecule
CC are useful in the manufacture of a medicament for the treatment of
CC carcinoma, where the composition is a vaccine. An agent which interacts
CC with or causes change in the expression or activity of an RAIG1
CC polypeptide or nucleic acid molecule, is also useful in the manufacture
CC of a medicament for the treatment of carcinoma that is breast cancer,
CC pancreatic cancer, lung cancer, liver cancer, ovarian cancer, colon
CC cancer and/or osteosarcoma. They can also be used in the diagnosis and
CC screening of such carcinomas.

XX	PT	useful for diagnosing, prognosing or treating cancer, comprises detecting		
XX	PT	a nucleic acid in a biological sample.		
XX	PS	Claim 12; SEQ ID NO 620; 1385pp; English.		
XX	CC	The invention relates to nucleic acids and proteins (ADN39683-ADN40064)		
XX	CC	whose expression is upregulated or downregulated in specific cancers or		
XX	CC	other diseases such as angiogenic or fibrotic disorders, and to methods		
XX	CC	of determining the presence or absence of a pathological cell in a		
XX	CC	patient by detecting a nucleic acid at least 80% identical to those of		
XX	CC	the invention or by detecting a polypeptide of the invention. The		
XX	CC	invention also relates to expression vectors and host cells comprising a		
XX	CC	nucleic acid of the invention; antibodies which specifically bind a		
XX	CC	polypeptide of the invention; use of such antibodies for drug targeting;		
XX	CC	and methods of screening for modulators of activity or expression of the		
XX	CC	polypeptides and nucleic acids. The nucleic acids, polypeptides,		
XX	CC	antibodies and methods are useful for diagnosing, prognosing and treating		
XX	CC	cancer and other conditions such as psoriasis, ischaemia, heart disease,		
XX	CC	atherosclerosis, inflammatory diseases, autoimmune diseases, retinal		
XX	CC	neovascularisation syndromes, scarring and uterine fibroids. They may		
XX	CC	also be useful in wound healing and in contraception. The present		
XX	CC	sequence represents a polypeptide of the invention.

XX New nucleic acid molecule encoding a human G-protein coupled receptor,
PT RAI3, useful for preventing, treating or ameliorating chronic obstructive
PT pulmonary disease (COPD), COPD-like disorder, or the underlying symptoms
PT of COPD.
XX Claim 5; SEQ ID NO 3; 301pp; English.
XX The present sequence is the protein sequence of a human G-protein coupled
CC receptor (Class C, Group 5), denoted retinoic acid induced 3 (RAI-3).
CC Proteomics methods were used to isolate cigarette smoke-inducible
CC tyrosine phosphorylated proteins from airway epithelial cells. RAI-3 was
CC identified as being tyrosine phosphorylated and/or as being
CC associated/complexed with tyrosine phosphorylated proteins only in cells
CC that had been exposed to cigarette smoke. Since RAI-3 is primarily
CC expressed in lung tissue, and since cigarette smoke is a major causative
CC factor of chronic obstructive pulmonary disease (COPD), RAI-3 provides a
CC novel cellular target for identifying modulators, e.g. agonists or
CC antagonists, useful for the treatment and/or prevention of COPD and
CC related disorders such as emphysema and chronic bronchitis. RAI-3
CC modulators, e.g. agonists and antagonists, especially antisense
CC compounds, can be used to treat COPD and other disorders and diseases
CC associated with regulation of NF-kB and/or its associated or interacting
CC signalling molecules. Single nucleotide polymorphisms (SNPs) detected in
CC the RAI-3 gene are useful for determining COPD association in
CC individuals. 3 Of the SNPs result in alterations in the RAI-3 amino acid
CC sequence. Of these, Ser118Gly and Thr182A are at positions which are not
CC conserved between human and murine RAI-3 sequences, whereas Gln307Arg
CC involves a conserved amino acid residue. RAI-3 nucleic acid molecules and
CC polypeptides are useful for preventing, treating or ameliorating
CC disorders related to aberrant GPCR signaling or cell cycle regulation,
CC pulmonary disorders, inflammatory lung disorders, COPD, the underlying
CC symptoms of COPD, COPD-related disorders or conditions, autoimmune
CC disorders, disorders related to hyperimmune activity, inflammatory

CC conditions, disorders related to aberrant acute phase responses,
CC hypercongenital conditions, birth defects, necrotic lesions, wounds,
CC organ transplant rejection, renal diseases, ischaemia-reperfusion injury,
CC heart disorders, disorders related to aberrant signal transduction,
CC proliferation disorders, cancers, HIV infection, asthma, cystic fibrosis,
CC pulmonary fibrosis, ulcerative colitis, cerebral infarct, myocardial
CC infarct, diabetic nephropathy, allergic rhinitis, Crohn's disease,
CC atherosclerosis, rheumatoid arthritis, inflammatory/autoimmune disorders,
CC glioblastoma, pulmonary small cell undifferentiated carcinoma, carcinoma
CC of the breast, colon, lung, ovary, pancreas, prostate, non-Hodgkin's
CC lymphoma, disorders associated with aberrant cell adhesion, I-CAM
CC function and/or regulation, E-selectin function and/or regulation, or
CC aberrant NF-kB function and/or regulation (all claimed).

 XX
 XX Novel mammalian G protein coupled receptors, useful for identifying
 PT compounds that modulates diagnosing and treating disease condition
 PT associated with GPCR dysfunction e.g. autoimmune diseases, angina
 PT pectoris, Parkinson's disease.
 XX
 XX Claim 151; SEQ ID NO 734; 542pp; English.
 XX
 XX The invention relates to human and mouse G protein-coupled receptors
 CC (GPCRs) and nucleic acids encoding them. The invention also relates to
 CC sequences at least 90% identical to the GPCR proteins and nucleic acids
 CC of the invention; methods of treating, preventing or diagnosing diseases
 CC associated with GPCRs of the invention; methods of screening for
 CC compounds useful in the treatment of GPCR-related diseases; a transgenic
 CC mouse comprising a GPCR gene of the invention; a mouse comprising a
 CC mutation in a GPCR transgene or in an endogenous GPCR gene; cells derived
 CC from the transgenic mice; kits comprising several mice, each of which has
 CC a mutation in a different GPCR gene of the invention; and kits comprising
 CC probes which hybridize to GPCR polynucleotides of the invention. The
 CC invention further discloses variants of the GPCR polypeptides and vectors
 CC comprising a GPCR nucleic acid. The GPCR nucleic acids and proteins may
 CC be used in the diagnosis, treatment or prevention of a wide variety of
 CC diseases including neurological disorders (e.g., Alzheimer's disease,
 CC depression, diabetic neuropathy, Parkinson's disease or schizophrenia);
 CC disorders of the adrenal gland; disorders of the colon or intestine
 CC (e.g., Crohn's disease, diarrhea, food poisoning or irritable bowel
 CC syndrome); cardiovascular disorders (e.g., angina, cardiac arrhythmia or
 CC myocardial infarction); muscular disorders; blood disorders (e.g.,
 CC anaemia or leukaemia); immune disorders (e.g., autoimmune disorders or
 CC AIDS); bone and joint disorders (e.g., osteoarthritis, rheumatoid
 CC arthritis, gout or osteoporosis); metabolic or nutritive disorders (e.g.,
 CC obesity, enzyme deficiency-related diseases or vitamin deficiency-related
 CC diseases); and disorders of the kidney, liver, lung, breast, ovary,
 CC uterus, prostate, testis, skin, stomach, pancreas, spleen, thymus and
 CC thyroid (e.g., cancers). The present sequence represents a GPCR of the
 CC invention. Note: The full sequence data for this patent did not form part
 CC of the printed specification; those sequences not shown were obtained in
 CC electronic format directly from WIPO at
 CC ftp.wipo.int/pub/published_pct_sequences.

 PT Detecting pancreatic cancer-associated transcript in a biological sample,
 PT useful for diagnosing or treating the disease, comprises contacting the
 PT sample with a polynucleotide that selectively hybridizes to a specific
 PT sequence.
 XX
 PS Claim 7; SEQ ID NO 10; 263pp; English.
 CC
 CC The present invention describes a method for detecting a pancreatic
 CC cancer-associated transcript in a biological sample. The method comprises
 CC contacting the biological sample with a polynucleotide that selectively
 CC hybridizes to a sequence at least 80% identical to a sequence as shown in
 CC any one of Tables 3 to 25 in the specification or having the GenBank
 CC Accession Number AF279145. Also described: (1) diagnosing pancreatic
 CC cancer in a human or animal subject being tested, determining the
 CC likelihood that a subject having a pancreatic cancer will survive, or
 CC determining the suitability of a subject having a pancreatic cancer for
 CC surgical resection therapy; (2) detecting a pancreatic cancer-associated
 CC polypeptide in a biological sample; (3) determining the likelihood that a
 CC subject having a pancreatic cancer will survive; and (4) monitoring the
 CC efficacy of a therapeutic treatment of pancreatic cancer. A pancreatic
 CC cancer-associated transcript has cytostatic activity, and can be used in
 CC gene and protein therapy. A pancreatic cancer-associated transcript
 CC polynucleotide, a vector comprising the polynucleotide, an isolated
 CC polypeptide or an antibody that binds to the isolated polypeptide can be
 CC used for diagnosing or prognosing pancreatic cancer or for preparing a
 CC medicament for the treatment of pancreatic cancer. The prognostic or
 CC diagnostic methods are useful for the early detection of pancreatic
 CC cancer or its metastases, and for monitoring the progress of disease such
 CC as during remission or following surgery or chemotherapy. The present

XX New nucleic acid, and derived proteins, useful for diagnosis of bronchial
PT cancer and in screening for therapeutic and diagnostic agents.
XX Claim 2; SEQ ID NO 839; 1381pp; German.
XX This invention relates to a novel isolated nucleic acid associated with
CC bronchial cancer comprising 489 defined sequences given in the
CC specification. The invention may be useful for the production of
CC compounds with a cytostatic activity through the inhibition of expression
CC or activity of tumour-associated proteins. The novel DNA sequences and
CC the proteins/peptides encoded by them are used for detecting bronchial
CC cancer or determining the risk of developing it and to screen for
CC specific binding partners of the DNA or protein sequences, where the
CC binding partners are potentially useful as agents for treating or
CC diagnosing bronchial cancer. The DNA or protein sequences can also be
CC used for prognosis, detection of metastases and for secondary treatment
CC (of tumours that have been stabilised or are no longer detectable).
CC Detecting abnormal expression of the DNA sequences provides early
CC diagnosis of bronchial cancers. The present sequence is that of a protein
CC encoded by a novel bronchial cancer-associated human gene sequence of the
CC invention.

XX Novel isolated antibody capable of binding to tumor-associated antigenic
PT target polypeptide, useful for treating cell proliferative disorder e.g.
PT cancer.
XX Claim 1; SEQ ID NO 118; 337pp; English.
XX The invention relates to a novel isolated antibody binding to a
CC polypeptide having at least 80% sequence identity to a polypeptide having
CC any one of 76 fully defined 182-910 amino acid tumor-associated antigenic
CC target polypeptide (TAT) sequences (AEA00127-AEA00202) given in the
CC specification, a polypeptide having any one of (AEA00127-AEA00202),
CC lacking its associated signal peptide, or an extracellular domain of a
CC polypeptide having any one of (AEA00127-AEA00202). The polypeptide is
CC encoded by the nucleotide sequence having any one of (AEA00049-AEA00126).
CC An antibody of the invention has cytostatic activity. The antibody is
CC useful for inhibiting growth of a cell expressing TAT188, which involves
CC contacting the cell with the antibody. The cell is a cancer cell chosen
CC from breast, colon, rectum, endometrium, kidney, lung, ovary, skin and
CC liver cell. The cancer cell is a mammalian cell, preferably a human cell.
CC The antibody is also useful for detecting the level of TAT188
CC polypeptide expressed in a test cell relative to a control cell, and for
CC detecting the level of TAT188 polypeptide or a polypeptide having at
CC least 80 % sequence identity to the TAT188 polypeptide sequence in a test
CC cell relative to a control cell. The antibody is useful for treating a
CC preventing a cell proliferative disorder associated with increased
CC expression or activity of a polypeptide having at least 80 % identity to
CC a TAT188 polypeptide sequence. The cell proliferative disorder is cancer.
CC The method of the invention is useful for inhibiting the growth of a
CC cancer cell. The present sequence represents a polypeptide of the
CC invention.

XX
XX Novel isolated antibody capable of binding to tumor-associated antigenic
PT target polypeptide, useful for treating cell proliferative disorder e.g.
PT cancer.
XX
PS Claim 1; SEQ ID NO 142; 337pp; English.
XX
XX The invention relates to a novel isolated antibody binding to a
CC polypeptide having at least 80% sequence identity to a polypeptide having
CC any one of 76 fully defined 182-910 amino acid tumor-associated antigenic

CC target polypeptide (TAT) sequences (AEA00127-AEA00202) given in the
CC specification, a polypeptide having any one of (AEA00127-AEA00202),
CC lacking its associated signal peptide, or an extracellular domain of a
CC polypeptide having any one of (AEA00127-AEA00202). The polypeptide is
CC encoded by the nucleotide sequence having any one of (AEA00049-AEA00126).
CC An antibody of the invention has cytostatic activity. The antibody is
CC useful for inhibiting growth of a cell expressing TAT188, which involves
CC contacting the cell with the antibody. The cell is a cancer cell chosen
CC from breast, colon, rectum, endometrium, kidney, lung, ovary, skin and
CC liver cell. The cancer cell is a mammalian cell, preferably a human cell.
CC The antibody is also useful for detecting the level of TAT188
CC polypeptide expressed in a test cell relative to a control cell, and for
CC detecting the level of TAT188 polypeptide or a polypeptide having at
CC least 80 % sequence identity to the TAT188 polypeptide sequence in a test
CC cell relative to a control cell. The antibody is useful for treating a
CC preventing a cell proliferative disorder associated with increased
CC expression or activity of a polypeptide having at least 80 % identity to
CC a TAT188 polypeptide sequence. The cell proliferative disorder is cancer.
CC The method of the invention is useful for inhibiting the growth of a
CC cancer cell. The present sequence represents a polypeptide of the
CC invention.

Pred. No. is the number of results predicted by chance to have a score greater than or equal to the score of the result being printed, and is derived by analysis of the total score distribution.

1st strand cDNA was primed with a NotI-oligo(dT) primer. Five prime end enriched, double-strand cDNA was digested with Not I and cloned into the Not I and EcoR V sites of the PCMVSPORT 6 vector. Library was normalized. Library was constructed by Life Technologies, a division of Invitrogen. This sequence belongs to sequence cluster 6601.f

For more information about this cluster, see
<http://www.genoscope.cns.fr/cdna?cs=CS0DK005BH03QP1&c=6601.f>.

1st strand cDNA was primed with a NotI-oligo(dT) primer. Five prime
end enriched, double-strand cDNA was digested with Not I and cloned
into the Not I and EcoR V sites of the pCMVSPORT 6 vector. Library
was normalized. Library was constructed by Life Technologies, a
division of Invitrogen. This sequence belongs to sequence cluster
5601.f
For more information about this cluster, see
http://www.genoscope.cns.fr/cdna?s=CS0D1025DC050Pl&c=6601.f.

RESULT 3
AX549168 2456 bp DNA linear PAT 26-NOV-2002
LOCUS
DEFINITION Sequence 453 from Patent WO02061087.

ACCESSION AX549168
VERSION AX549168.1 GI:25813894
KEYWORDS
SOURCE Homo sapiens (human)
ORGANISM Homo sapiens
Bukaryota; Metazoa; Chordata; Craniata; Vertebrata; Euteleostomi;
Mammalia; Eutheria; Euarchontoglires; Primates; Catarrhini;
Hominidae; Homo.
REFERENCE
AUTHORS Burner,G.C., Roush,C.L. and Brown,J.P.
TITLE Antigenic peptides, such as for G protein-coupled receptors
(GPCRs), antibodies thereto, and systems for identifying such
antigenic peptides
JOURNAL Patent: WO 02061087-A 453 08-AUG-2002;

RESULT 8

AK122672
LOCUS Homo sapiens cDNA FLJ16117 fis, clone ASTRO2003632, highly smilar
DEFINITION to Homo sapiens putative G protein-coupled receptor (RAIG1) mRNA.

AK122672
VERSION AK122672.1 GI:34527861

KEYWORDS oligo capping; fis (full insert sequence).

SOURCE Homo sapiens (human)

ORGANISM

Homo sapiens
Eukaryota; Metazoa; Chordata; Craniata; Vertebrata; Euteleostomi;
Mammalia; Eutheria; Euarchontoglires; Primates; Catarrhini;
Homnidae; Homo.

Database :

UniProt 7.2.*

1: uniprot_sprot.*

2: uniprot_trembl.*

Pred. No. is the number of results predicted by chance to have a
score greater than or equal to the score of the result being printed,
and is derived by analysis of the total score distribution.

RT "Molecular cloning and characterization of two novel retinoic acid-
RT inducible orphan G-protein-coupled receptors (GPRC5B and GPRC5C).";
RL Genomics 67:8-18(2000).
CC -!- FUNCTION: Unknown. This G-protein coupled receptor could be
CC involved in modulating differentiation and maintaining homeostasis
CC of epithelial cells. The comparable expression level in fetal lung
CC and kidney with adult tissues suggests a possible role in
CC embryonic development and maturation of these organs. This
CC retinoic acid-inducible GPCR provide evidence for a possible
CC interaction between retinoid and G-protein signaling pathways.
CC -!- SUBCELLULAR LOCATION: Integral membrane protein. Localized in the
CC plasma membrane and perinuclear vesicles.
CC -!- TISSUE SPECIFICITY: Expressed at high level in fetal and adult
CC lung tissues. Constitutively expressed in fetal kidney and adult
CC placenta, kidney, prostate, testis, ovary, small intestine, colon,
CC stomach, and spinal chord at low to moderate levels. Not
CC detectable in fetal heart, brain, and liver and adult heart,
CC brain, liver, skeletal muscle, pancreas, spleen, thymus, and
CC peripheral leukocytes. According to Ref.5: expressed at low but
CC detectable level in pancreas and heart.
CC -!- INDUCTION: By all-trans retinoic acid (ATRA).
CC -!- SIMILARITY: Belongs to the G-protein coupled receptor 3 family.

Madan, Stephanie Rodrigues, Amy Sanchez and Michelle Whiting
Clone distribution: MGC clone distribution information can be found
through the I.M.A.G.E. Consortium/LLNL at: http://image.llnl.gov
Series: IMAGE Plate: 3 Row: 1 Column: 11
This clone was selected for full length sequencing because it
passed the following selection criteria: matched mRNA gi: 12056470.

Submitted (30-AUG-2002) Human Genome Sequencing Center, Department
of Molecular and Human Genetics, Baylor College of Medicine, One
Baylor Plaza, Houston, TX 77030, USA
On Sep 1, 1999 this sequence version replaced gi:5757565.
INFORMATION: <http://www.hgsc.bcm.tmc.edu/> or email
gc-help@bcm.tmc.edu
CLONE LENGTH: This sequence does not necessarily represent the
entire insert of this clone. Overlapping regions of clones are only
sequenced and submitted once, so the sequence for the remainder of
the insert may be found in the record for the adjacent clones.
Overlapping clones are noted at the beginning and end of the
Features listing.
ANNOTATION OF FEATURES:
STSs are identified using ePCR (Genome Res. 7:541-550) searches
of a local database that includes entries from dbSTS, GDB, and
local mapping efforts.
Repeats are identified using RepeatMasker (A. Smit and P. Green,
unpublished.) for Human and Mouse sequences.
Genes and Region of sequence similarity are identified by BLAST
(Nuc. Acids Res. 25:3389-3402) similarity (expect < 1e-34) to the
EST and cDNA sequences. Genes demonstrate at least two exons
flanked by consensus splice sites that maintained sequence
continuity across the splice junctions. Sequences that are not
identical matches are annotated as similar.
SEQUENCING READ COVERAGE: Sequencing is completed to a minimum
standard of double strand coverage with a minimum of 2 clones and 2
reads with no ambiguities or 2 chemistries with a minimum of 2
clones and 3 reads with no ambiguities. If the sequence quality for
a region does not meet this standard, it will be indicated in the
annotation as Low Coverage.
QUALITY OF INDIVIDUAL BASES: This sequence meets stringent quality
standards - estimated error rate less than 1 per 10,000 bases.
Reports of lowest quality individual bases and measures of base
quality are listed below. Description of the metrics can be found
at URL:
<http://gc.bcm.tmc.edu:8088/quality.info/genbank.annotation.html>.

On Nov 15, 2002 this sequence version replaced gi:23908481.
The sequence in this assembly is a combination of BAC based reads
and whole genome shotgun sequencing reads assembled using Atlas
(http://www.hgsc.bcm.tmc.edu/projects/rat/). Each contig described
in the feature table below represents a scaffold in the Atlas
assembly (a 'contig-scaffold'). Within each contig-scaffold,
individual sequence contigs are ordered and oriented, and separated
by sized gaps filled with Ns to the estimated size. The sequence
may extend beyond the ends of the clone and there may be sequence
contigs within a contig-scaffold that consist entirely of whole
genome shotgun sequence reads. Both end sequences and whole genome
shotgun sequence only contigs will be indicated in the feature

COMMENT

CLONE LENGTH: This sequence does not necessarily represent the
 entire insert of this clone. Overlapping regions of clones are only
 sequenced and submitted once, so the sequence for the remainder of
 the insert may be found in the record for the adjacent clones.
 Overlapping clones are noted at the beginning and end of the
 Features listing.

ANNOTATION OF FEATURES:

STSs are identified using ePCR (Genome Res. 7:541-550) searches
 of a local database that includes entries from dbSTS, GDB, and
 local mapping efforts.

Repeats are identified using RepeatMasker (A. Smit and P. Green,
 unpublished.) for Human and Mouse sequences.

Genes and Region of sequence similarity are identified by BLAST
 (Nuc. Acids Res. 25:3389-3402) similarity (expect < 1e-34) to the
 EST and cDNA sequences. Genes demonstrate at least two exons
 flanked by consensus splice sites that maintained sequence
 continuity across the splice junctions. Sequences that are not
 identical matches are annotated as similar.

SEQUENCING READ COVERAGE: Sequencing is completed to a minimum
 standard of double strand coverage with a minimum of 2 clones and 2
 reads with no ambiguities or 2 chemistries with a minimum of 2
 clones and 3 reads with no ambiguities. If the sequence quality for
 a region does not meet this standard, it will be indicated in the
 annotation as Low Coverage.

QUALITY OF INDIVIDUAL BASES: This sequence meets stringent quality
 standards - estimated error rate less than 1 per 10,000 bases.
 Reports of lowest quality individual bases and measures of base
 quality are listed below. Description of the metrics can be found
 at URL:
<http://www.hgsc.bcm.tmc.edu:8088/quality.info/genbank.annotation.ht>

COMMENT
On May 13, 2003 this sequence version replaced gi:22856732.
The sequence in this assembly is a combination of BAC based reads
and whole genome shotgun sequencing reads assembled using Atlas
(http://www.hgsc.bcm.tmc.edu/projects/rat/). Each contig described
in the feature table below represents a scaffold in the Atlas
assembly (a 'contig-scaffold'). Within each contig-scaffold,
individual sequence contigs are ordered and oriented, and separated
by sized gaps filled with Ns to the estimated size. The sequence
may extend beyond the ends of the clone and there may be sequence
contigs within a contig-scaffold that consist entirely of whole
genome shotgun sequence reads. Both end sequences and whole genome
shotgun sequence only contigs will be indicated in the feature
table.

Cow Genome Sequencing Consortium.

Direct Submission

Submitted (01-JUL-2005) Human Genome Sequencing Center, Department of Molecular and Human Genetics, Baylor College of Medicine, One Baylor Plaza, Houston, TX 77030, USA

On June 29, 2005 this sequence version replaced gi:58743475.

The sequence in this assembly is a combination of BAC based reads and whole genome shotgun sequencing reads assembled using Atlas (<http://www.hgsc.bcm.tmc.edu/projects/rat/>). Each contig described in the feature table below represents a scaffold in the Atlas assembly (a 'contig-scaffold'). Within each contig-scaffold, individual sequence contigs are ordered and oriented, and separated by sized gaps filled with Ns to the estimated size. The sequence may extend beyond the ends of the clone and there may be sequence contigs within a contig-scaffold that consist entirely of whole genome shotgun sequence reads. Both end sequences and whole genome shotgun sequence only contigs will be indicated in the feature table.

Contact: hgsc-help@bcm.tmc.edu

----- Project Information

Center project name: FDOO

Center clone name: CH240-62M20

----- Summary Statistics

Assembly program: Atlas 3.0;

Consensus quality: 213349 bases at least Q40

Consensus quality: 215963 bases at least Q30

Consensus quality: 218476 bases at least Q20

Estimated insert size: 220573; sum-of-contigs estimation

Quality coverage: 5x in Q20 bases; sum-of-contigs estimation

* NOTE: Estimated insert size may differ from sequence length (see http://www.hgsc.bcm.tmc.edu/docs/Genbank_draft_data.html).
* NOTE: This is a 'working draft' sequence. It currently consists of 27 contigs. The true order of the pieces is not known and their order in this sequence record is arbitrary. Gaps between the contigs are represented as runs of N, but the exact sizes of the gaps are unknown.
* This record will be updated with the finished sequence as soon as it is available and the accession number will be preserved.

* 1 9337: contig of 9337 bp in length

----- Genome Center
Center: Washington University Genome Sequencing Center
Center code: WUGSC
Web site: http://genome.wustl.edu
Contact: submissions@watson.wustl.edu
----- Summary Statistics
Center project name: M_BB0181L03

NOTICE: This sequence may not represent the entire insert of this
clone. It may be shorter because we only sequence overlapping
clone sections once, or longer because we provide a small overlap
between neighboring data submissions.

This sequence was finished as follows unless otherwise noted:
all regions were double stranded, sequenced with an alternate
chemistry, or covered by high quality data (i.e., phred quality >= 30); an attempt was made to resolve all sequencing problems, such
as compressions and repeats; all regions were covered by sequence
from more than one subclone; and the assembly was confirmed by
restriction digest.

MAPPING INFORMATION:

Mapping information for this clone was provided by Dr. Wes Warren,
Department of Genetics, Washington University, St. Louis MO. For
additional information about the map position of this sequence, see
http://genome.wustl.edu

SOURCE INFORMATION:

The RPCI-24 BAC Library has been constructed by Pieter de Jong and
coworkers (http://www.chori.org) from male C57BL/6J mouse spleen
and/or brain genomic DNA. The clone and detailed information can be
obtained from Pieter de Jong and coworkers at http://www.chori.org

NEIGHBORING SEQUENCE INFORMATION:

This sequence is the entire insert of the clone.

Direct Submission
Submitted (13-NOV-2002) Human Genome Sequencing Center, Department
of Molecular and Human Genetics, Baylor College of Medicine, One
Baylor Plaza, Houston, TX 77030, USA
On Nov 13, 2002 this sequence version replaced gi:22772986.
The sequence in this assembly is a combination of BAC based reads
and whole genome shotgun sequencing reads assembled using Atlas
(http://www.hgsc.bcm.tmc.edu/projects/rat/). Each contig described
in the feature table below represents a scaffold in the Atlas
assembly (a 'contig-scaffold'). Within each contig-scaffold
individual sequence contigs are ordered and oriented, and separated
by sized gaps filled with Ns to the estimated size. The sequence
may extend beyond the ends of the clone and there may be sequence
contigs within a contig-scaffold that consist entirely of whole
genome shotgun sequence reads. Both end sequences and whole genome
shotgun sequence only contigs will be indicated in the feature
table.

----- Project Information
Center project name: GDBT
Center clone name: CH230-9B21
----- Summary Statistics
Assembly program: Phrap; version 0.990329
Consensus quality: 215114 bases at least Q40
Consensus quality: 217886 bases at least Q30
Consensus quality: 219758 bases at least Q20
Estimated insert size: 221396; sum-of-contigs estimation
Quality coverage: 7x in Q20 bases; sum-of-contigs estimation
-----
* NOTE: Estimated insert size may differ from sequence length
* (see http://www.hgsc.bcm.tmc.edu/docs/genbank_draft_data.html).
* NOTE: This is a 'working draft' sequence. It currently
* consists of 3 contigs. The true order of the pieces
* is not known and their order in this sequence record is
* arbitrary. Gaps between the contigs are represented as
* runs of N, but the exact sizes of the gaps are unknown.
* This record will be updated with the finished sequence
* as soon as it is available and the accession number will
* be preserved.
* 1 101341: contig of 101341 bp in length
* 101342 101441: gap of unknown length
* 101442 219685: contig of 118244 bp in length
* 219686 219785: gap of unknown length
* 219786 247690: contig of 27905 bp in length.

----- Genome Center
Center: Baylor College of Medicine
Center code: BCM
Web site: http://www.hgsc.bcm.tmc.edu/
Contact: hgsc-help@bcm.tmc.edu
----- Project Information
Center project name: GXIU
Center clone name: CH230-473J6
----- Summary Statistics
Sequencing vector: Plasmid;
Chemistry: Dye-terminator Big Dye; 100% of reads
Assembly program: Phrap; version 0.990329
Consensus quality: 130671 bases at least Q40
Consensus quality: 139673 bases at least Q30
Consensus quality: 145030 bases at least Q20
Estimated insert size: 13121; sum-of-contigs estimation
Quality coverage: 2x in Q20 bases; sum-of-contigs estimation
-----
* NOTE: Estimated insert size may differ from sequence length
* (see http://www.hgsc.bcm.tmc.edu/docs/Genbank_draft_data.html).
* NOTE: This is a 'working draft' sequence. It currently
* consists of 61 contigs. The true order of the pieces
* is not known and their order in this sequence record is
* arbitrary. Gaps between the contigs are represented as
* runs of N, but the exact sizes of the gaps are unknown.
* This record will be updated with the finished sequence
* as soon as it is available and the accession number will
* be preserved.
*

```

The sequence data in this record represents an 'enhanced' version of a Phase 2 submission. Specifically, the indicated order and orientation of each sequence contig has been established using one or more of the following: read-pair data from individual subclones, overlaps with neighboring clones, alignment with available reference sequence (e.g., human), and/or confirmation by PCR testing. In addition, the sequence assembly is generally based on at least 8x average coverage in Q20 bases and has been reviewed to rule out gross misassemblies, the low-quality ends of sequence contigs have been trimmed away, and each base is associated with a Phrap-derived quality score.

```

----- Summary Statistics
Sequencing vector: plasmid; n/a; 100% of reads
Chemistry: Dye-terminator Big Dye; 100% of reads
Assembly program: Phrap; version 0.990319
Consensus quality: 172156 bases at least Q40
Consensus quality: 172470 bases at least Q30

```

Consensus quality: 172582 bases at least Q20
 Insert size: 195000; agarose-fp
 Insert size: 172671; sum-of-contigs
 Quality coverage: 9.00x in Q20 bases; agarose-fp
 Quality coverage: 10.16x in Q20 bases; sum-of-contigs

 * NOTE: This is a 'working draft' sequence. It currently
 * consists of 5 contigs. Gaps between the contigs
 * are represented as runs of N. The order of the pieces
 * is believed to be correct as given, however the sizes
 * of the gaps between them are based on estimates that have
 * provided by the submittor.
 * This sequence will be replaced
 * by the finished sequence as soon as it is available and
 * the accession number will be preserved.
 * 1 2231: contig of 2231 bp in length
 * 2232 2331: gap of unknown length
 * 2232 6543: contig of 4212 bp in length
 * 6544 6643: gap of unknown length
 * 6544 94753: contig of 88110 bp in length
 * 94754 94853: gap of unknown length
 * 94854 142336: contig of 47483 bp in length
 * 142337 142437: gap of unknown length
 * 142437 173071: contig of 30635 bp in length.

 Direct Submission
 Submitted (20-APR-2001) Genome Sequencing Center, Washington
 University School of Medicine, 4444 Forest Park Parkway, St. Louis,
 MO 63108, USA
 On May 27, 2001 this sequence version replaced gi:13775308.

----- Genome Center -----
 Center: Washington University Genome Sequencing Center
 Center code: WUGSC
 Web site: http://genome.wustl.edu/gsc/index.shtml
 ----- Project Information -----
 Center project name: H_NH0693B19
 ----- Summary Statistics -----
 Sequencing vector: M13; 100%
 Chemistry: Dye-terminator Big Dye; 41% of reads
 Chemistry: Dye-terminator Big Dye; 41% of reads
 Assembly program: Phrap; version 0.990319
 Consensus quality: 160140 bases at least Q40
 Consensus quality: 168580 bases at least Q30
 Consensus quality: 173999 bases at least Q20
 Insert size: 179000; agarose-fp
 Insert size: 184722; sum-of-contigs
 Quality coverage: 3.11 in Q20 bases; agarose-fp
 Quality coverage: 3.10 in Q20 bases; sum-of-contigs

 * NOTE: This is a 'working draft' sequence. It currently
 * consists of 40 contigs. The true order of the pieces
 * is not known and their order in this sequence record is
 * arbitrary. Gaps between the contigs are represented as
 * runs of N, but the exact sizes of the gaps are unknown.
 * This record will be updated with the finished sequence
 * as soon as it is available and the accession number will
 * be preserved.
 * 1 1660: contig of 1660 bp in length
 * 1661 1760: gap of unknown length
 * 1761 2764: contig of 1004 bp in length
 * 2765 2864: gap of unknown length

NOTICE: This sequence may not be the entire insert of this clone.
It may be shorter because we only sequence overlapping sections
once, or longer because we provide a small overlap between
neighboring submissions.
This sequence was finished as follows unless otherwise noted: all
regions were double stranded, sequenced with an alternate chemistry
or covered by high quality data (i.e., phred quality >= 30); an
attempt was made to resolve all sequencing problems, such as
compressions and repeats; all regions were covered by sequence from
more than one m13 subclone.
For a graphical representation of this clone sequence and its
analysis see:
http://www.wormbase.org/db/seq/sequence?name=Y32G9B;class=Sequence
NEIGHBORING CLONE INFORMATION
The 5' clone is Y46H3A, 400 bp overlap; the 3' clone is T10B5, 600
bp overlap.
NOTES:

SEQUENCING READ COVERAGE: Sequencing is completed to a minimum standard of double strand coverage with a minimum of 2 clones and 2 reads with no ambiguities or 2 chemistries with a minimum of 2 clones and 3 reads with no ambiguities. If the sequence quality for a region does not meet this standard, it will be indicated in the annotation as Low Coverage.

QUALITY OF INDIVIDUAL BASES: This sequence meets stringent quality standards - estimated error rate less than 1 per 10,000 bases. Reports of lowest quality individual bases and measures of base quality are listed below. Description of the metrics can be found at URL:

http://www.hgsc.bcm.tmc.edu:8088/quality.info/genbank.annotation.html.

Contact: submissions@watson.wustl.edu
----- Summary Statistics

Center project name: H_NH0567N20

NOTICE:
This sequence was finished as follows unless otherwise noted:
all regions were double stranded, sequenced with an alternate

chemistry, or covered by high quality data (i.e., phred quality >= 30); an attempt was made to resolve all sequencing problems, such as compressions and repeats; all regions were covered by sequence from more than one subclone; and the assembly was confirmed by restriction digest.

MAPPING INFORMATION:

Mapping information for this clone was provided by Dr. Mes Warren, Department of Genetics, Washington University, St. Louis MO. For additional information about the map position of this sequence, see <http://genome.wustl.edu>

SOURCE INFORMATION:

The RPEC11 human BAC library was made from the blood of one male donor, as described by Oseogawa, K., Woon, P.Y., Zhao, B., Frengen, E., Tateno, M., Catanese, J.J. and de Jong, P.J. (1998) An improved approach for construction of bacterial artificial chromosome libraries. *Genomics* 51:1-8. The clone may be obtained either from Research Genetics, Inc. (<http://www.resgen.com>) or Pieter de Jong and coworkers at <http://www.chori.org> VECTOR: pBACe3.6

NEIGHBORING SEQUENCE INFORMATION:

The clone sequenced to the left is RP11-249F13, 2000 bp overlap; the clone sequenced to the right is RP11-16D24. Actual start of this clone is at base position 149708 of RP11-249F13; actual end is at base position 136657 of RP11-567N20.

Data from AC011936 was used to finish the clone, AC068600. Polymorphisms have been identified between AC011936 and AC068600.

COMMENT * NOTE: This is a 'working draft' sequence. It currently
* consists of 9 contigs. The true order of the pieces

* is not known and their order in this sequence record is
* arbitrary. Gaps between the contigs are represented as
* runs of N, but the exact sizes of the gaps are unknown.
* This record will be updated with the finished sequence
* as soon as it is available and the accession number will
* be preserved.

1 2042: contig of 2042 bp in length

-----
* NOTE: This record contains 81 individual
* sequencing reads that have not been assembled into
* contigs. Runs of N are used to separate the reads
* and the order in which they appear is completely
* arbitrary. Low-pass sequence sampling is useful for
* identifying clones that may be gene-rich and allows
* overlap relationships among clones to be deduced.
* However, it should not be assumed that this clone
* will be sequenced to completion. In the event that
* the record is updated, the accession number will
* be preserved.
*

----- Project Information
Center project name: GRAV
Center clone name: CH230-58G18
----- Summary Statistics
Assembly program: Phrap; version 0.990329
Consensus quality: 185782 bases at least Q40
Consensus quality: 188579 bases at least Q30
Consensus quality: 190025 bases at least Q20
Estimated insert size: 210634; sum-of-contigs estimation
Quality coverage: 4x in Q20 bases; sum-of-contigs estimation
-----
* NOTE: Estimated insert size may differ from sequence length
* (see http://www.hgsc.bcm.tmc.edu/docs/genbank_draft_data.html).
* NOTE: This is a 'working draft' sequence. It currently
* consists of 5 contigs. The true order of the pieces
* is not known and their order in this sequence record is
* arbitrary. Gaps between the contigs are represented as
* runs of N, but the exact sizes of the gaps are unknown.
* This record will be updated with the finished sequence
* as soon as it is available and the accession number will
* be preserved.
1 13135: contig of 13135 bp in length
* 13136 13235: gap of unknown length
* 13236 191447: contig of 178212 bp in length
* 191448 191547: gap of unknown length
* 191548 192710: contig of 1163 bp in length
* 192711 192810: gap of unknown length
* 192811 192750: contig of 4440 bp in length
* 192751 197350: gap of unknown length
* 197351 205274: contig of 7924 bp in length.

----- Summary Statistics
Center project name: J_AA011F14

NOTICE:
This sequence was finished as follows unless otherwise noted:
all regions were double stranded, sequenced with an alternate
chemistry, or covered by high quality data (i.e., phred quality >=
30); an attempt was made to resolve all sequencing problems, such
as compressions and repeats; all regions were covered by sequence
from more than one subclone; and the assembly was confirmed by

```

```

restriction digest.
SOURCE INFORMATION:
This sequence is the entire insert of the clone.

 On Nov 9, 2002 this sequence version replaced gi:22772219.

The sequence in this assembly is a combination of BAC based reads
 and whole genome shotgun sequencing reads assembled using Atlas
 (<http://www.hgsc.bcm.tmc.edu/projects/rat/>). Each contig described
 in the feature table below represents a scaffold in the Atlas
 assembly (a 'contig-scaffold'). Within each contig-scaffold,
 individual sequence contigs are ordered and oriented, and separated
 by sized gaps filled with Ns to the estimated size. The sequence
 may extend beyond the ends of the clone and there may be sequence
 contigs within a contig-scaffold that consist entirely of whole
 genome shotgun sequence reads. Both end sequences and whole genome
 shotgun sequence only contigs will be indicated in the feature
 table.

 Web site: <http://genome.wustl.edu>
 Contact: submissions@wustl.edu
 ----- Summary Statistics
 Center project name: M_BB0386H10

NOTICE: This sequence may not represent the entire insert of this
 clone. It may be shorter because we only sequence overlapping
 clone sections once, or longer because we provide a small overlap
 between neighboring data submissions.

This sequence was finished as follows unless otherwise noted:
 all regions were double stranded, sequenced with an alternate
 chemistry, or covered by high quality data (i.e., phred quality >=
 30); an attempt was made to resolve all sequencing problems, such
 as compressions and repeats; all regions were covered by sequence
 from more than one subclone; and the assembly was confirmed by
 restriction digest.

MAPPING INFORMATION:
 Mapping information for this clone was provided by Dr. Wes Warren,
 Department of Genetics, Washington University, St. Louis MO. For
 additional information about the map position of this sequence, see
<http://genome.wustl.edu>

SOURCE INFORMATION:
 The RPCI-24 BAC Library has been constructed by Pieter de Jong and
 coworkers (<http://www.chori.org>) from male C57BL/6J mouse spleen
 and/or brain genomic DNA. The clone and detailed information can be
 obtained from Pieter de Jong and coworkers at <http://www.chori.org>

NEIGHBORING SEQUENCE INFORMATION:
 This sequence is the entire insert of the clone.

 ----- Project Information

Center project name: ayt
Center clone name: 300L05

The sequence data in this record represents an 'enhanced' version of a Phase 2 submission. Specifically, the indicated order and orientation of each sequence contig has been established using one or more of the following: read-pair data from individual subclones, overlaps with neighboring clones, alignment with available reference sequence (e.g., human), and/or confirmation by PCR testing. In addition, the sequence assembly is based on at least 8x average coverage in Q20 bases and has been reviewed to rule out gross misassemblies, the low-quality ends of sequence contigs have been trimmed away, and each base is associated with a Phrap-derived quality score.

----- Summary Statistics

Sequencing vector: plasmid; n/a; 100% of reads
Chemistry: Dye-terminator Big Dye; 100% of reads
Assembly program: Phrap; version 0.990319
Consensus quality: 207698 bases at least Q40
Consensus quality: 208254 bases at least Q30
Consensus quality: 208411 bases at least Q20
Insert size: 168000; agarose-fp
Insert size: 208453; sum-of-contigs
Quality coverage: 13.81x in Q20 bases; agarose-fp
Quality coverage: 11.13x in Q20 bases; sum-of-contigs

* NOTE: This is a 'working draft' sequence. It currently
* consists of 8 contigs. Gaps between the contigs
* are represented as runs of N. The order of the pieces
* is believed to be correct as given, however the sizes
* of the gaps between them are based on estimates that have
* provided by the submitter.
* This sequence will be replaced
* by the finished sequence as soon as it is available and
* the accession number will be preserved.
*
* 1 28791: contig of 28791 bp in length
* 28792 28991: gap of unknown length
* 28892 94557: contig of 65666 bp in length

Rat Genome Sequencing Consortium.
 Direct Submission
 Submitted (15-NOV-2002) Human Genome Sequencing Center, Department
 of Molecular and Human Genetics, Baylor College of Medicine, One
 Baylor Plaza, Houston, TX 77030, USA
 On Nov 15, 2002 this sequence version replaced gi:23321716.
 The sequence in this assembly is a combination of BAC based reads
 and whole genome shotgun sequencing reads assembled using Atlas
 (http://www.hgsc.bcm.tmc.edu/projects/rat/). Each contig described
 in the feature table below represents a scaffold in the Atlas
 assembly (a 'contig-scaffold'). Within each contig-scaffold,
 individual sequence contigs are ordered and oriented, and separated
 by sized gaps filled with Ns to the estimated size. The sequence
 may extend beyond the ends of the clone and there may be sequence
 contigs within a contig-scaffold that consist entirely of whole
 genome shotgun sequence reads. Both end sequences and whole genome
 shotgun sequence only contigs will be indicated in the feature
 table.

XX
PT New isolated nucleic acids and polypeptides capable of eliciting a
PT humoral and/or cellular immune response, useful for diagnosing,
PT preventing or treating cancer, particularly colon cancer.
XX
PS Claim 1; SEQ ID NO 1937; 244pp; English.
XX
XX The invention relates to a new isolated nucleic acid. The nucleic acids,
CC polypeptides, antibodies are useful for diagnosing, preventing or
CC treating cancer, particularly colon cancer. The nucleic acid and
CC polypeptides are also useful in DNA strand invasion, antisense
CC inhibition, mutational analysis, nucleic acid purification, isolation of
CC transcriptionally active genes, blocking or transcription factor binding,
CC genome cleavage or in situ hybridization, and as enhancers of
CC transcription or biomarkers. The kits are useful for detecting antibody
CC binding. The present sequence represents a human cDNA encoding a colon
CC cancer protein.

CC
```

```
CC associated with cancer, particularly colon cancer. Also disclosed are (i)
CC an expression vector comprising the polynucleotide, (ii) a host cell
CC transformed or transfected with the expression vector, (iii) an isolated
CC antibody, or its antigen-binding fragment, which specifically binds to
CC the polypeptide, (iv) a method of detecting or determining the presence
CC of cancer in a patient, (v) a fusion protein comprising at least one of
CC the polypeptides, (vi) an oligonucleotide that hybridises to the
CC polynucleotide sequence under highly stringent conditions, and (vii) a
CC method of stimulating and/or expanding T cells specific for a tumour
CC protein. The polypeptide specifically comprises the amino acid sequence
CC of C634S, C635S, C637S, C640S, C636S or one of the potential open reading
CC frames (ORFs) of C636S. These polypeptides are encoded by the
CC polynucleotide sequences, where both are capable of eliciting a humoral
CC and/or cellular immune response. The polynucleotides, polypeptides, and
CC antibodies are useful for diagnosing, preventing or treating cancer,
CC particularly colon cancer. The polynucleotide and polypeptide sequences
CC are also useful in DNA strand invasion, antisense inhibition, mutational
CC analysis, nucleic acid purification, isolation of transcriptionally
CC active genes, blocking or transcription factor binding, genome cleavage
CC or in situ hybridisation, and as enhancers of transcription or
CC biomarkers. This sequence represents a human colon cancer associated
CC cDNA. Note: The sequence data for this patent was obtained in electronic
CC format directly from the USPTO web site at seqdata.uspto.gov

PT Novel human proteins having hydrophobic domains used for research and
PT diagnostic purposes.
XX
PS Claim 3; Page 88; 117pp; English.
XX
CC This sequence represents the hydrophobic domain containing protein, clone
CC HP10549 coding region. The sequence is isolated from a human stomach
CC cancer cell line. The invention relates to human proteins with
CC hydrophobic domains, the DNA and the cDNA encoding them. The
CC polynucleotides and proteins are predicted to have biological activities
CC which make them suitable for treating, preventing or ameliorating medical
CC conditions in humans and animals. Suggested activities include
CC nutritional activity (nutritional source or supplement); cytokine and
CC cell proliferation/differentiation activity; immune stimulating (e.g. as
CC vaccines) or suppressing activity (e.g. to treat various immune
CC
CC deficiencies such as SCIDS or HIV, connective tissue disease, systemic
CC lupus erythematosus, rheumatoid arthritis, autoimmune pulmonary
CC inflammation, Guillain-Barre syndrome, autoimmune thyroiditis, insulin
CC dependent diabetes mellitus, myasthenia gravis, graft-versus-host disease
CC and autoimmune inflammatory eye disease, as well as asthma, allergies and
CC organ transplantation); haematopoiesis regulating activity (e.g. in
CC treatment of myeloid or lymphoid cell deficiencies); tissue growth
CC activity (e.g. wound healing and tissue repair, ulcers, burns,
CC periodontal disease); activin/inhibin activity; chemotactic/chemokinetic
CC activity; haemostatic and thrombolytic activity (e.g. treating
CC haemophilias); receptor/ligand activity; anti-inflammatory activity; and
CC tumour inhibition activity. The polynucleotides are also stated to be
CC useful for gene therapy. Other activities include inhibiting infections
CC caused by bacteria, fungi, viruses and other parasites (e.g. Hepatitis,
CC malaria); effecting bodily characteristics such as, e.g. weight, colour,
CC skin, effecting biorhythms or cardiac cycles; enhancing fertility;
CC treatment of depression; treatment of pain; hormonal or endocrine
CC activity. The polynucleotides may also be used for recombinant expression
CC of the protein

XX Novel isolated polypeptide encoded by breast cancer marker gene, useful
PT for diagnosing, staging, monitoring, prognosing and treating diseases
PT associated with breast cancer.

PS Disclosure; Page 187-188; 725pp; English.

XX The invention relates to an isolated polypeptide encoded by a breast
CC cancer marker gene comprising any of 141/21-805 nucleotide sequences,
CC given in the specification. The methods of the invention are useful for
CC diagnosing patients having an identified breast mass or symptoms
CC associated with breast cancer, to diagnose breast cancer or its
CC precursors, and for monitoring the efficacy of treatment of a breast
CC cancer patient (e.g. efficacy of chemotherapy). The methods are also
CC useful for evaluating a patient before, after or during therapy, to
CC evaluate the reduction in a tumour burden. The breast cancer marker gene
CC proteins are useful as immunogens for raising antibodies, by immunising a
CC mammal with a breast cancer marker protein. The marker proteins are
CC useful as bait proteins in a two-hybrid or three-hybrid assay, to
CC identify other proteins which bind to or interact with the marker
CC proteins. The breast cancer marker genes are useful as surrogate marker
CC genes for one or more disorders, disease states or conditions leading to
CC disease states, in particular, breast cancers. The breast cancer marker
CC genes are useful as pharmacodynamic marker genes. An antibody which
CC selectively binds to a protein of a breast cancer marker gene is useful
CC for treating cancers, particularly breast cancers. The host cell of the
CC polynucleotide sequence represents one of the breast cancer marker genes
CC of the invention

XX Novel mammalian G protein coupled receptors, useful for identifying
PT compounds that modulates diagnosing and treating disease condition
PT associated with GPCR dysfunction e.g. autoimmune diseases, angina
PT pectoris, Parkinson's disease.
XX
XX Claim 151; SEQ ID NO 1137; 542pp; English.
PS
XX
XX The invention relates to human and mouse G protein-coupled receptors
CC (GPCRs) and nucleic acids encoding them. The invention also relates to
CC sequences at least 90% identical to the GPCR proteins and nucleic acids
CC of the invention; methods of treating, preventing or diagnosing diseases
CC associated with GPCRs of the invention; methods of screening for
CC compounds useful in the treatment of GPCR-related diseases; a transgenic
CC mouse comprising a GPCR gene of the invention; a mouse comprising a
CC mutation in a GPCR transgene or in an endogenous GPCR gene; cells derived
CC from the transgenic mice; kits comprising several mice, each of which has
CC a mutation in a different GPCR gene of the invention; and kits comprising

CC probes which hybridise to GPCR polynucleotides of the invention. The
CC invention further discloses variants of the GPCR polypeptides and vectors
CC comprising a GPCR nucleic acid. The GPCR nucleic acids and proteins may
CC be used in the diagnosis, treatment or prevention of a wide variety of
CC diseases including neurological disorders (e.g., Alzheimer's disease,
CC depression, diabetic neuropathy, Parkinson's disease or schizophrenia);
CC disorders of the adrenal gland; disorders of the colon or intestine
CC (e.g., Crohn's disease, diarrhoea, food poisoning or irritable bowel
CC syndrome); cardiovascular disorders (e.g., angina, cardiac arrhythmia or
CC myocardial infarction); muscular disorders; blood disorders (e.g.,
CC anaemia or leukaemia); immune disorders (e.g., autoimmune disorders or
CC AIDS); bone and joint disorders (e.g., osteoarthritis, rheumatoid
CC arthritis, gout or osteoporosis); metabolic or nutritive disorders (e.g.,
CC obesity, enzyme deficiency-related diseases or vitamin deficiency-related
CC diseases); and disorders of the kidney, liver, lung, breast, ovary,
CC uterus, prostate, testis, skin, stomach, pancreas, spleen, thymus and
CC thyroid (e.g., cancers). The present sequence represents a GPCR-encoding
CC nucleic acid of the invention. Note: The full sequence data for this
CC patent did not form part of the printed specification, those sequences
CC not shown were obtained in electronic format directly from WIPO at
CC ftp.wipo.int/pub/published_pct_sequences.

PS
XX
XX The invention relates to novel nucleic acid sequences derived from rat

CC dermal papilla, human keratinocytes and neonatal foreskin fibroblasts,
CC and mouse embryonic skin, keratinocyte stem cells and transit amplifying
CC cells. Polypeptides of the invention may be used to treat inflammation,
CC cancer and neurological diseases. The proteins may be used to stimulate
CC the growth and motility of keratinocytes, to inhibit the growth of cancer
CC cells, to modulate angiogenesis and tumour vascularisation, to modulate
CC skin inflammation, to modulate epithelial cell growth and to inhibit
CC binding of HIV-1 to leukocytes. The invention may also be used to treat
CC growth and developmental defects, skin wounds and hair follicle
CC disorders. Sequences AAZ61606-261832 represent cDNA sequences derived
CC from several mice, rat or human skin cell types. Sequences AAZ61606-
CC Z61649, AAZ61725-261765, AAZ61802-261811 and AAZ61826 encode proteins
CC with an N-terminal signal sequence, indicating that the proteins are
CC secreted. Sequences AAZ61650-261668, AAZ61766-261780, AAZ61812-261817 and
CC AAZ61827-261829 encode proteins with one or more putative transmembrane
CC domains

XX New polynucleotides and polypeptides encoded by the polynucleotides
PT isolated from skin cells, useful for treating skin wounds, cancers,
PT growth and developmental defects, inflammatory diseases, or for
PT modulating immune responses.

PS Claim 1; Page 175; 466pp; English.

XX The present invention provides the protein and coding sequences of cDNAs
CC isolated from human, murine and rat skin cell libraries. The sequences
CC can be used in the development of therapeutic agents useful in the
CC treatment of skin diseases, including skin wounds, cancer, growth
CC defects, developmental defects and inflammatory diseases. The proteins
CC have important roles in the induction of hair growth, cell proliferation
CC and cell-cell interaction, in maintaining tissue integrity, in wound
CC healing and in modulating immune responses. The present sequence is a
CC cDNA of the invention

XX Combination for research/diagnostic applications and for monitoring
PT treatment of e.g., cancer, comprises polynucleotides comprising a
PT fragment of gene encoding membrane-associated proteins, receptors or ion
PT channels.
PS Claim 1; Col 215-216; 147pp; English.
XX
CC The invention relates to a combination comprising several polynucleotide
CC sequences comprising a fragment of gene encoding membrane-associated
CC proteins, receptors or ion channels. The combination is useful as a
CC probe, for research and diagnostic applications, for monitoring the
CC expression of several expressed polynucleotides, in the diagnosis and
CC monitoring of treatment of pancreatic disease, cancer, immunopathology or
CC neuropathology, for investigating an individual's predisposition to the
CC above disease, in genetic or gene expression analysis of polynucleotide
CC sequences, to investigate cellular responses to infection or drug
CC treatment, as hybridisable array elements in a microarray, to purify a
CC subpopulation of mRNAs, cDNAs or genomic fragments, in drug discovery and
CC diagnostics, prognostics and treatment regimens, in drug discovery and
CC development, in toxicological and carcinogenicity studies, and in
CC forensics or pharmacogenomics, to monitor the progression of disease, to
CC monitor the efficacy of treatment, to diagnose the conditions of the
CC pancreas e.g. diabetes, pancreatic cholera, hyperlipidaemia or
CC fibrocystic disease, to diagnose a cancer e.g. leukaemia, adenocarcinoma
CC or sarcoma, to diagnose immunopathologies e.g. AIDS, allergies, anaemia,
CC asthma or gout, to diagnose neuropathologies e.g. Alzheimer's disease,
CC dementia or Huntington's disease, to rapidly screen large numbers of
CC candidate drug molecules and as query sequences against GenBank,
CC SwissProt, BLOCKS and PRINTS databases. The combination is employed to
CC fine tune the treatment regimen and thus the expression patterns
CC associated with undesirable side effects are avoided. The present
CC sequence represents a cDNA encoding a fragment of gene encoding human
CC membrane-associated proteins, receptors or ion channels

XX
PT Novel isolated antibody capable of binding to tumor-associated antigenic
PT target polypeptide, useful for treating cell proliferative disorder e.g.
PT cancer.
XX
PS Claim 1; SEQ ID NO 64; 337pp; English.
XX
CC The invention relates to a novel isolated antibody binding to a
CC polypeptide having at least 80% sequence identity to a polypeptide having
CC any one of 76 fully defined 182-910 amino acid tumor-associated antigenic
CC target polypeptide (TAT) sequences (AEA00127-AEA00202) given in the
CC specification, a polypeptide having any one of (AEA00127-AEA00202),
CC lacking its associated signal peptide, or an extracellular domain of a
CC polypeptide having any one of (AEA00127-AEA00202). The polypeptide is
CC encoded by the nucleotide sequence having any one of (AEA00049-AEA00126).
CC An antibody of the invention has cytostatic activity. The antibody is
CC useful for inhibiting growth of a cell expressing TAT188, which involves
CC contacting the cell with the antibody. The cell is a cancer cell chosen
CC from breast, colon, rectum, endometrium, kidney, lung, ovary, skin and
CC liver cell. The cancer cell is a mammalian cell, preferably a human cell.
CC The antibody is also useful for detecting the level of TAT188

CC polypeptide expressed in a test cell relative to a control cell, and for
CC detecting the level of TAT188 polypeptide or a polypeptide having at
CC least 80 % sequence identity to the TAT188 polypeptide sequence in a test
CC cell relative to a control cell. The antibody is useful for treating a
CC preventing a cell proliferative disorder associated with increased
CC expression or activity of a polypeptide having at least 80 % identity to
CC a TAT188 polypeptide sequence. The cell proliferative disorder is cancer.
CC The method of the invention is useful for inhibiting the growth of a
CC cancer cell. The present sequence encodes a polypeptide of the invention.

XX Novel isolated antibody e.g. anti-E16 or anti-TAT112 antibody that binds

PT to tumor-associated antigenic target polypeptide, useful for diagnosing

PT or treating cancer.

XX Claim 1; SEQ ID NO 64; 96pp; English.

XX This invention relates to a novel isolated antibody, for example anti-E16

CC or anti-TAT112 antibody, that binds to a tumor-associated antigenic

CC target polypeptide (TAT) and that lacks an associated signal peptide

CC sequence. The invention may be useful for the development of compounds

CC with a cytostatic activity acting as antagonists of the TAT188

CC polypeptide or RNA interference whilst the disclosed sequences may be

CC useful for gene therapy. The invention is useful for inducing the death

CC of a cell (such as a cancer cell chosen from breast, colon, rectum,
CC endometrium, kidney, lung, ovary, skin and liver) to which it binds,
CC inhibiting proliferation or promoting cell death of a cell expressing
CC TAT188. In addition, the invention may be useful for detecting the level
CC of TAT188 polypeptide in a test cell relative to a control cell, or
CC treating or preventing a cell proliferative disorder associated with
CC increased expression of TAT188. The novel antibody of the invention is
CC useful for inhibiting the growth of a cancer cell and may be useful for
CC diagnosing or treating cancer. The present sequence is that of the human
CC TAT143 cDNA which encodes a protein against which an antibody of the
CC invention may be targeted.

XX Novel human proteins having hydrophobic domains used for research and
XX diagnostic purposes.
XX
XX Claim 4; Page 111-113; 117pp; English.
XX
XX This sequence represents the hydrophobic domain containing protein, clone
XX HP10549 nucleotide sequence. The sequence is isolated from a human
XX stomach cancer cell line. The invention relates to human proteins with
XX hydrophobic domains, the DNA and the cDNA encoding them. The
XX polynucleotides and proteins are predicted to have biological activities
XX which make them suitable for treating, preventing or ameliorating medical
XX conditions in humans and animals. Suggested activities include
XX nutritional activity (nutritional source or supplement); cytokine and
XX cell proliferation/differentiation activity; immune stimulating (e.g. as
XX vaccines) or suppressing activity (e.g. to treat various immune
XX deficiencies such as SCIDs or HIV, connective tissue disease, systemic
XX lupus erythematosus, rheumatoid arthritis, autoimmune pulmonary
XX inflammation, Guillain-Barre syndrome, autoimmune thyroiditis, insulin
CC
CC dependent diabetes mellitus, myasthenia gravis, graft-versus-host disease
CC and autoimmune inflammatory eye disease, as well as asthma, allergies and
CC organ transplantation); haematopoiesis regulating activity (e.g. in
CC treatment of myeloid or lymphoid cell deficiencies); tissue growth
CC activity (e.g. wound healing and tissue repair, ulcers, burns,
CC periodontal disease); activin/inhibin activity; chemotactic/chemokinetic
CC activity; haemostatic and thrombolytic activity (e.g. treating
CC haemophilias); receptor/ligand activity; anti-inflammatory activity; and
CC tumour inhibition activity. The polynucleotides are also stated to be
CC useful for gene therapy. Other activities include inhibiting infections
CC caused by bacteria, fungi, viruses and other parasites (e.g. Hepatitis,
CC malaria); effecting bodily characteristics such as, e.g. weight, colour,
CC skin, effecting biorhythms or cardiac cycles; enhancing fertility;
CC treatment of depression; treatment of pain; hormonal or endocrine
CC activity. The polynucleotides may also be used for recombinant expression
CC of the protein

XX in expression or activity of an RAIG1 polypeptide or encoding nucleic
XX acid molecule.

XX Claim 1; Fig 2; 43pp; English.

XX This sequence encodes retinoic acid-inducible gene 1 (RAIG1) polypeptide.
XX RAIG1 is an orphan G-protein coupled receptor (GPCR) located on
XX chromosome 12. RAIG1 shows a restricted expression pattern compared to a
XX related receptor, GPCR5B, which is widely expressed in peripheral and
XX central tissues. The RAIG1 cDNA and polypeptide sequence may be used in
XX the method of the invention for screening for and/or diagnosis of
XX carcinoma in a subject, and/or monitoring the effectiveness of carcinoma
XX therapy. The method comprises detecting and/or quantifying in a
XX biological sample obtained from the subject an RAIG1 polypeptide and a
XX nucleic acid molecule. The RAIG1 polypeptide and nucleic acid molecule
XX are useful in the manufacture of a medicament for the treatment of
XX carcinoma, where the composition is a vaccine. An agent which interacts
XX with or causes change in the expression or activity of an RAIG1
XX polypeptide or nucleic acid molecule, is also useful in the manufacture
XX of a medicament for the treatment of carcinoma that is breast cancer,
XX pancreatic cancer, lung cancer, liver cancer, ovarian cancer, colon

CC cancer and/or osteosarcoma. They can also be used in the diagnosis and
CC screening of such carcinomas.

CC The invention comprises DNA sequences which are associated with
CC intestinal epithelium and peyer's patch M cells. The DNA sequences of the
CC invention are useful for assessing, modifying, modulating or regulating
CC intestinal epithelium or M cell development. The DNA sequences of the
CC invention are also useful in the treatment of: inflammatory bowel
CC disease, glutenenteropathy, infectious diseases, autoimmune diseases
CC (e.g. haemolytic anaemia, rheumatoid arthritis, dermatitis, Grave's
CC disease, multiple sclerosis, allergy, asthma and diabetic mellitus),
CC diseases or disorders of the immune system, hypersensitivity,
CC anaphylaxis, and blood group incompatibility. The present nucleic acid
CC represents an intestinal epithelium/peyer's patch M cell-associated DNA
CC sequence of the invention. NOTE: The present sequence is not shown in the
CC specification, but has been retrieved from the WIPO website.

XX Primer sets for synthesizing polynucleotides, particularly the 5602 full-
PT length cDNAs defined in the specification, and for the detection and/or
PT diagnosis of the abnormality of the proteins encoded by the full-length
PT cDNAs.
XX
XX Claim 8; SEQ ID NO 12388; 2537pp + Sequence Listing; English.
XX
XX The present invention describes primer sets for synthesizing 5602 full-
CC length cDNAs defined in the specification. Where a primer set comprises:
CC (a) an oligo-dT primer and an oligonucleotide complementary to the
CC complementary strand of a polynucleotide which comprises one of the 5602
CC nucleotide sequences defined in the specification, where the
CC oligonucleotide comprises at least 15 nucleotides; or (b) a combination
CC of an oligonucleotide comprising a sequence complementary to the
CC complementary strand of a polynucleotide which comprises a 5'-end
CC sequence and an oligonucleotide comprising a sequence complementary to a
CC polynucleotide which comprises a 3'-end sequence, where the
CC oligonucleotide comprises at least 15 nucleotides and the combination of
CC the 5'-end sequence/3'-end sequence is selected from those defined in the
CC specification. The primer sets can be used in antisense therapy and in
CC gene therapy. The primers are useful for synthesizing polynucleotides,
CC particularly full-length cDNAs. The primers are also useful for the
CC detection and/or diagnosis of the abnormality of the proteins encoded by
CC the full-length cDNAs. The primers allow obtaining of the full-length
CC cDNAs easily without any specialised methods. AAH03166 to AAH13628 and
CC AAH13633 to AAH18742 represent human cDNA sequences; AAB92446 to AAB95893
CC represent human amino acid sequences; and AAH13629 to AAH13632 represent
CC oligonucleotides, all of which are used in the exemplification of the
CC present invention

XX New isolated antigenic peptides e.g., for G protein-coupled receptors
PT (GPCR), useful for diagnosing and designing drugs for treating conditions
PT in which GPCRs are involved, e.g. AIDS, Alzheimer's disease, cancer or
PT autoimmune diseases.
XX
XX Disclosure; Fig 1; 523pp; English.
XX
XX The present invention describes antigenic peptides (I) comprising: (a)
CC any one of 1601 sequences (see ABP82019 to ABP83619) of 12-24 amino
CC acids. Also described: (1) an assay for the detection of a particular G
CC protein-coupled receptor (GPCR) or a candidate polypeptide in a sample;
CC and (2) an isolated antibody having high specificity and high affinity or
CC avidity for a particular GPCR. (I) can be used as GPCR modulators and in
CC gene therapy. The antigenic peptides for GPCRs are useful in detecting an
CC antibody against a particular GPCR, and in the production of specific
CC antibodies. The peptides and antibodies are also useful for detecting the
CC presence or absence of corresponding GPCRs. The antigenic peptides for
CC GPCRs and antibodies are useful for diagnosing and designing drugs for
CC treating immune-related diseases, growth-related diseases, cell
CC regeneration-related disease, immunological-related cell proliferative
CC diseases, or autoimmune diseases, e.g. AIDS, Alzheimer's disease,
CC atherosclerosis, bacterial, fungal, protozoan or viral infections,
CC osteoarthritis, osteoporosis, cancer, cardiomyopathy, chronic and acute
CC inflammation, allergies, Crohn's disease, diabetes, graft versus host
CC disease, Parkinson's disease, multiple sclerosis, pain, psoriasis,
CC anxiety, depression, schizophrenia, dementia, mental retardation, memory
CC loss, epilepsy, asthma, tuberculosis, obesity, nausea, hypertension, or
CC hypotension, renal disorders, rheumatoid arthritis, trauma, ulcers, or
CC any other disorder in which GPCRs are involved. The antibodies may be
CC used in immunoassays and immunodiagnosis. ABZ42523 to ABZ42869 encode
CC GPCR proteins given in ABP81675 to ABP82018, which are used in the
CC exemplification of the present invention

XX New genes that are up-regulated or down-regulated in cancers, useful as
PT markers for diagnosing e.g. cancer, ischemia or heart diseases, or as
PT therapeutic targets for screening drugs for treating these diseases.
XX Claim 8; Page 643-644; 767pp; English.
XX The present invention describes an isolated nucleic acid molecule, which
CC comprises the sequence of any of the genes that are up-regulated or down-
CC regulated in specific cancers (e.g. about 1031 genes up-regulated in
CC acute lymphocytic leukemia). ACC72641 to ACC72860 represent cancer
CC related gene nucleotide sequences which encode the proteins given in
CC ABR58521 to ABR58709. Also described: (1) determining the presence or
CC absence of a pathological cell in a patient; (2) an expression vector
CC comprising a nucleic acid molecule described above; (3) a host cell
CC comprising the vector; (4) an isolated polypeptide, which is encoded by
CC the nucleic acid; (5) an antibody that specifically binds the polypeptide
CC of (4); (6) specifically targeting a compound to a pathological cell in a
CC patient by administering to the patient the antibody above; and (7) a
CC drug screening assay. The nucleic acid is useful as diagnostic markers or
CC therapeutic targets. In particular, the nucleic acid is useful for
CC diagnosing a pathology, e.g. cancer (e.g. cancer of the bone marrow,
CC bladder, brain, breast, cervix, colon/rectum, kidney, lung, ovary,
CC pancreas, prostate, skin and uterus), wounds, ischaemia, heart diseases,
CC atherosclerosis and endometriosis. The nucleic acid is also useful in
CC drug screening, particularly for identifying agents for treating these
CC pathologies

PT New nucleic acid molecule encoding a human G-protein coupled receptor,
PT RAI3, useful for preventing, treating or ameliorating chronic obstructive
PT pulmonary disease (COPD), COPD-like disorder, or the underlying symptoms
PT of COPD.
XX
PS Claim 21; SEQ ID NO 18; 301pp; English.
XX
CC The present sequence is that of cDNA encoding a human G-protein coupled
CC receptor (Class C, Group 5), denoted retinoic acid induced 3 (RAI-3).
CC Proteomics methods were used to isolate cigarette smoke-inducible
CC tyrosine phosphorylated proteins from airway epithelial cells. RAI-3 was
CC identified as being tyrosine phosphorylated and/or as being
CC associated/complexed with tyrosine phosphorylated proteins only in those
CC cells that had been exposed to cigarette smoke. Since RAI-3 is primarily
CC expressed in lung tissue, and since cigarette smoke is a major causative
CC factor of chronic obstructive pulmonary disease (COPD), RAI-3 provides a
CC novel cellular target for identifying modulators, e.g. agonists or
CC antagonists, useful for the treatment and/or prevention of COPD and
CC related disorders such as emphysema and chronic bronchitis. RAI-3
CC modulators, e.g. agonists and antagonists, especially antisense
CC compounds, can be used to treat COPD and/or its associated or diseases
CC associated with regulation of NF-kB and/or its associated or interacting
CC signaling molecules. Single nucleotide polymorphisms (SNPs) detected in
CC the RAI-3 gene are useful for determining COPD association in
CC individuals. RAI-3 nucleic acid molecules and polypeptides are useful for
CC preventing, treating or ameliorating disorders related to aberrant GPCR

New nucleic acid molecule encoding a human G-protein coupled receptor,
RAI3, useful for preventing, treating or ameliorating chronic obstructive
pulmonary disease (COPD), COPD-like disorder, or the underlying symptoms
of COPD.
Claim 1; SEQ ID NO 2; 301pp; English.
The present sequence is that of cDNA encoding a human G-protein coupled
receptor (Class C, Group 5), denoted retinoic acid induced 3 (RAI-3).
Proteomics methods were used to isolate cigarette smoke-inducible
tyrosine phosphorylated proteins from airway epithelial cells. RAI-3 was
identified as being tyrosine phosphorylated and/or as being
associated/complexed with tyrosine phosphorylated proteins only in those
cells that had been exposed to cigarette smoke. Since RAI-3 is primarily
expressed in lung tissue, and since cigarette smoke is a major causative
factor of chronic obstructive pulmonary disease (COPD), RAI-3 provides a
novel cellular target for identifying modulators, e.g. agonists or
antagonists, useful for the treatment and/or prevention of COPD and
related disorders such as emphysema and chronic bronchitis. RAI-3
modulators, e.g. agonists and antagonists, especially antisense
compounds, can be used to treat COPD and other disorders and diseases
associated with regulation of NF-kB and/or its associated or interacting
signaling molecules. Single nucleotide polymorphisms (SNPs) detected in
the RAI-3 gene are useful for determining COPD association in
individuals. RAI-3 nucleic acid molecules and polypeptides are useful for
preventing, treating or ameliorating disorders related to aberrant GPCR
signaling or cell cycle regulation, pulmonary disorders, inflammatory
lung disorders, COPD, the underlying symptoms of COPD, COPD-related
disorders or conditions, autoimmune disorders, disorders related to
hyperimmune activity, inflammatory conditions, disorders related to
aberrant acute phase responses, hypercongenital conditions, birth
defects, necrotic lesions, wounds, organ transplant rejection, renal
diseases, ischaemia-reperfusion injury, heart disorders, disorders
related to aberrant signal transduction, proliferation disorders,
cancers, HIV infection, asthma, cystic fibrosis, pulmonary fibrosis,
ulcerative colitis, cerebral infarct, myocardial infarct, diabetic
nephropathy, allergic rhinitis, Crohn's disease, atherosclerosis,
rheumatoid arthritis, inflammatory/autoimmune disorders, glioblastoma,
CC pneumonia small cell undifferentiated carcinoma, carcinoma of the breast,
CC colon, lung, ovary, pancreas, prostate, non-Hodgkin's lymphoma, disorders
CC associated with aberrant cell adhesion, I-CAM function and/or regulation,
CC E-selectin function and/or regulation, or aberrant NF-kB function and/or
CC regulation (all claimed).

XX PT Diagnosing and treating a cancer, e.g. breast, lung, colon, or kidney
PT cancer, comprises detecting and blocking the over expression of a gene of
PT a protein found in breast, lung, colon, or kidney tissue.
XX PS Claim 2; SEQ ID NO 2; 220pp; English.
XX CC The present invention describes a method for diagnosing and treating a
CC cancer, e.g. breast, lung, colon, or kidney cancer. The method comprises
CC detecting and blocking the over expression of a gene of a protein found
CC in breast, lung, colon, or kidney tissue. Also described is an antibody
CC or binding portion of an antibody that specifically binds a protein found
CC in breast tissue, lung tissue, colon tissue, or kidney tissue. The
CC antibody has cytostatic activity, and can be used in gene therapy. The
CC methods, antibodies, polynucleotides and polypeptides from the present
CC invention are useful for detecting, diagnosing, preventing and treating
CC cancer, e.g. breast, lung, colon, or kidney cancer. The present sequence
CC represents a nucleotide sequence given in the present invention, which is
CC over expressed in human breast tumour tissue. N.B. All 385 sequences
CC referenced in this patent are detailed in the US provisional application
CC SN 60/447,900, filed 02/13/2003. In this application only one sequence,
CC representing the longest sequence of each of the 65 clones is listed in
CC Appendix A (and given as SEQ ID NO:1 to 65 in the Sequence Listing).

XX PT New nucleic acid, and derived proteins, useful for diagnosis of bronchial
PT cancer and in screening for therapeutic and diagnostic agents.
XX PS Claim 1; SEQ ID NO 350; 1381pp; German.
XX CC This invention relates to a novel isolated nucleic acid associated with
CC bronchial cancer comprising 489 defined sequences given in the
CC specification. The invention may be useful for the production of
CC compounds with a cytostatic activity through the inhibition of expression
CC or activity of tumour-associated proteins. The novel DNA sequences and
CC the proteins/peptides encoded by them are used for detecting bronchial
CC cancer or determining the risk of developing it and to screen for
CC specific binding partners of the DNA or protein sequences, where the
CC binding partners are potentially useful as agents for treating or
CC diagnosing bronchial cancer. The DNA or protein sequences can also be
CC used for prognosis, detection of metastases and for secondary treatment
CC (of tumours that have been stabilised or are no longer detectable).
CC Detecting abnormal expression of the DNA sequences provides early
CC diagnosis of bronchial cancers. The present sequence is that of a novel
CC bronchial cancer-associated human gene sequence of the invention.

XX
XX Novel isolated antibody capable of binding to tumor-associated antigenic
PT target polypeptide, useful for treating cell proliferative disorder e.g.
PT cancer.
PT
XX
XX Claim 1; SEQ ID NO 40; 337pp; English.
XX
XX The invention relates to a novel isolated antibody binding to a
CC polypeptide having at least 80% sequence identity to a polypeptide having
CC any one of 76 fully defined 182-910 amino acid tumor-associated antigenic
CC target polypeptide (TAT) sequences (AEA00127-AEA00202) given in the
CC specification, a polypeptide having any one of (AEA00127-AEA00202),
CC lacking its associated signal peptide, or an extracellular domain of a
CC polypeptide having any one of (AEA00127-AEA00202). The polypeptide is
CC encoded by the nucleotide sequence having any one of (AEA00049-AEA00126).
CC An antibody of the invention has cytostatic activity. The antibody is
CC useful for inhibiting growth of a cell expressing TAT188, which involves
CC contacting the cell with the antibody. The cell is a cancer cell chosen
CC from breast, colon, rectum, endometrium, kidney, lung, ovary, skin and
CC liver cell. The cancer cell is a mammalian cell, preferably a human cell.
CC The antibody is also useful for detecting the level of TAT188
CC polypeptide expressed in a test cell relative to a control cell, and for
CC detecting the level of TAT188 polypeptide or a polypeptide having at
CC least 80 % sequence identity to the TAT188 polypeptide sequence in a test
CC cell relative to a control cell. The antibody is useful for treating a
CC preventing a cell proliferative disorder associated with increased
CC expression or activity of a polypeptide having at least 80 % identity to
CC a TAT188 polypeptide sequence. The cell proliferative disorder is cancer.
CC The method of the invention is useful for inhibiting the growth of a
CC cancer cell. The present sequence encodes a polypeptide of the invention.

XX
XX Novel isolated antibody e.g. anti-E16 or anti-TAT112 antibody that binds
PT to tumor-associated antigenic target polypeptide, useful for diagnosing
PT or treating cancer.
PT
XX
XX Claim 1; SEQ ID NO 40; 96pp; English.
XX
XX This invention relates to a novel isolated antibody, for example anti-E16
CC or anti-TAT112 antibody, that binds to a tumor-associated antigenic
CC target polypeptide (TAT) and that lacks an associated signal peptide
CC sequence. The invention may be useful for the development of compounds
CC with a cytostatic activity acting as antagonists of the TAT188
CC polypeptide or RNA interference whilst the disclosed sequences may be
CC useful for gene therapy. The invention is useful for inducing the death
CC of a cell (such as a cancer cell chosen from breast, colon, rectum,
CC endometrium, kidney, lung, ovary, skin and liver) to which it binds,
CC inhibiting proliferation or promoting cell death of a cell expressing
CC TAT188. In addition, the invention may be useful for detecting the level
CC of TAT188 polypeptide in a test cell relative to a control cell, or
CC treating or preventing a cell proliferative disorder associated with
CC increased expression of TAT188. The novel antibody of the invention is
CC useful for inhibiting the growth of a cancer cell and may be useful for
CC diagnosing or treating cancer. The present sequence is that of the human
CC TAT115 cDNA which encodes a protein against which an antibody of the
CC invention may be targeted.

XX shock syndrome), inflammatory conditions (e.g., mastitis, oophoritis and
XX vaginitis), immune disorders (e.g., congenital and acquired
XX immunodeficiencies, autoimmune oophoritis, systemic lupus erythematosus),
XX blood-related disorders (e.g., anaemia), cardiovascular disorders,
XX respiratory disorders, neurological disorders, gastrointestinal disorders

CC and urinary system disorders. Ovarian antigen polypeptides and
CC polynucleotides may also be used in screening for compounds which
CC modulate ovarian antigen expression or activity. The polynucleotides may
CC further be used for gene therapy, chromosome mapping, in the
CC identification of individuals and in forensic analysis, and the
CC polypeptides may be used as food additives or to prepare antibodies
CC useful in disease diagnosis, drug targeting and phenotyping. The present
CC sequence represents cDNA encoding a human ovarian antigen of the
CC invention. Note: The sequence data for this patent did not form part of
CC the printed specification, but was obtained in electronic format directly
CC from WIPO at ftp.wipo.int/pub/published_pct_sequences

XX PT New nucleic acid differentially expressed in pancreatic tumor tissue, for
XX PT use as diagnostic agents and in screening for therapeutic agents.
XX PS Claim 1; SEQ ID NO 42; 28pp; German.
XX CC The invention relates to a novel human nucleic acid sequence of the
XX CC pancreas and its encoded protein. The invention further comprises:
XX CC proteins and peptides, preferably isolated, that contain a sequence
XX CC encoded by the novel nucleic acid; and methods for diagnosis and
XX CC treatment of pancreatic cancer, using a substance that inhibits or binds
XX CC to the protein or its DNA, including: an antisense oligonucleotide, short
XX CC interfering RNA or ribozyme directed against the pancreatic protein, an
XX CC organic molecule, particularly having a molecular weight below 5000,
XX CC especially 300, that binds to the pancreatic DNA, an aptamer or
XX CC (monoclonal) antibody, preferably human or humanized, that binds to the
XX CC pancreatic DNA, or an anti-idiotypic antibody raised against the
XX CC monoclonal antibody, any of which may be derivatized with a reporter
XX CC group, cytotoxic compound, immunostimulant and/or radioisotope. The novel
XX CC human pancreatic proteins and their encoding DNA have cytostatic
XX CC activity. The novel sequences are useful for inhibiting transcription
XX CC and/or expression of genes and proteins associated with pancreatic
XX CC cancer. This polynucleotide sequence represents the DNA encoding one of
XX CC the novel human pancreatic proteins of the invention. Note: This sequence
XX CC is not shown in the specification, it has been electronically downloaded
XX CC from a DVD-rom provided with this specification by the European Patent
XX CC Office.

XX PT Transformation of cells with a fusion protein of an orphan receptor
XX PT protein with a fluorescent protein useful for identification of ligands
XX PT to the orphan receptor.
XX PS Example 4; SEQ ID NO 196; 594pp; Japanese.
XX CC This invention relates to a novel method of identifying ligands to an
XX CC orphan receptor protein which comprises transforming cells with DNA
XX CC encoding a fusion protein of the orphan receptor with a fluorescent
XX CC protein, so that the fusion protein is expressed in the cells (or cell
XX CC membranes isolated from them) and contacting the cells with the potential
XX CC ligand to be tested. A suitable fluorescent protein for incorporation in
XX CC the fusion protein is green fluorescent protein (GFP), for example GFP-1,
XX CC wild-type GFP, GFPuv or Enhanced GFP (EGFP). The method is useful for the
XX CC identification of ligands binding to an orphan receptor protein.

XX Primer sets for synthesizing polynucleotides, particularly the 5602 full-
PT length cDNAs defined in the specification, and for the detection and/or
PT diagnosis of the abnormality of the proteins encoded by the full-length
PT cDNAs.
XX
XX Claim 1; SEQ ID NO 5189; 2537pp + Sequence Listing; English.
XX
XX The present invention describes primer sets for synthesizing 5602 full-
CC length cDNAs defined in the specification. Where a primer set comprises:
CC (a) an oligo-dT primer and an oligonucleotide complementary to the
CC complementary strand of a polynucleotide which comprises one of the 5602
CC nucleotide sequences defined in the specification, where the
CC oligonucleotide comprises at least 15 nucleotides; or (b) a combination
CC of an oligonucleotide comprising a sequence complementary to the
CC complementary strand of a polynucleotide which comprises a 5'-end
CC sequence and an oligonucleotide comprising a sequence complementary to a
CC polynucleotide which comprises a 3'-end sequence, where the
CC oligonucleotide comprises at least 15 nucleotides and the combination of
CC the 5'-end sequence/3'-end sequence is selected from those defined in the
CC specification. The primer sets can be used in antisense therapy and in
CC gene therapy. The primers are useful for synthesizing polynucleotides,
CC particularly full-length cDNAs. The primers are also useful for the
CC detection and/or diagnosis of the abnormality of the proteins encoded by
CC the full-length cDNAs. The primers allow obtaining of the full-length
CC cDNAs easily without any specialised methods. AAH03166 to AAH13628 and
CC AAH13633 to AAH18742 represent human cDNA sequences; AAB92446 to AAB95893
CC represent human amino acid sequences; and AAH13629 to AAH13632 represent
CC polynucleotides, all of which are used in the exemplification of the
CC present invention

XX
XX New nucleic acid molecule encoding a human G-protein coupled receptor,
PT RAI3, useful for preventing, treating or ameliorating chronic obstructive
PT pulmonary disease (COPD), COPD-like disorder, or the underlying symptoms
PT of COPD.
XX
XX Disclosure; SEQ ID NO 33; 301pp; English.
XX
XX The present sequence is that of DNA encoding a peptide corresponding to
CC amino acids 340-353 of a human G-protein coupled receptor, denoted
CC retinoic acid induced 3 (RAI-3) protein ADI28460. The peptide was
CC identified in studies of RAI-3 phosphorylation in response to cigarette
CC smoke. Primers based on this sequence can be used in a PCR to identify
CC individuals at risk for developing chronic obstructive pulmonary disease
CC (COPD). RAI-3 is tyrosine phosphorylated and/or is associated/complexed
CC with tyrosine phosphorylated proteins only in cells that have been
CC exposed to cigarette smoke. Since RAI-3 is primarily expressed in lung
CC tissue, and since cigarette smoke is a major causative factor of COPD,
CC RAI-3 provides a novel cellular target for identifying modulators, e.g.
CC agonists or antagonists, useful for the treatment and/or prevention of
CC COPD and related disorders such as emphysema and chronic bronchitis. RAI-
CC 3 modulators, e.g. agonists and antagonists, especially antisense
CC compounds, can be used to treat COPD and other disorders an diseases
CC associated with regulation of NF-kB and/or its associated or interacting
CC signaling molecules. Single nucleotide polymorphisms (SNPs) detected in
CC the RAI-3 gene are useful for determining COPD association in
CC individuals. RAI-3 nucleic acid molecules and polypeptides are useful for
CC preventing, treating or ameliorating disorders related to aberrant GPCR
CC signaling or cell cycle regulation, pulmonary disorders, inflammatory
CC lung disorders, COPD, the underlying symptoms of COPD, COPD-related
CC disorders or conditions, autoimmune disorders, disorders related to
CC hyperimmune activity, inflammatory conditions, disorders related to
CC aberrant acute phase responses, hypercongenital conditions, birth
CC defects, necrotic lesions, wounds, organ transplant rejection, renal
CC diseases, ischaemia-reperfusion injury, heart disorders, disorders
CC related to aberrant signal transduction, proliferation disorders,

PT Inducing an immune response against flavivirus, e.g. Japanese
PT encephalitis virus comprises administering a fusion envelope protein of
PT flavivirus or an expression vector containing a nucleic acid encoding the
PT fusion polypeptide.
XX
PS Disclosure; SEQ ID NO 12; 18pp; English.
XX
XX The present invention features a method of inducing an immune response in
CC a subject such as human or a non-human animal against a flavivirus. The
CC invention is useful for inducing an immune response in a subject against
CC flavivirus including Dengue virus, tick borne encephalitis virus, West
CC Nile encephalitis virus and Japanese encephalitis virus (JEV). The
CC present sequence is Japanese encephalitis virus (JEV) M15EB protein
CC encoding DNA. This DNA includes a 45 bp DNA fragment of the carboxyl-
CC terminal part of the JEV membrane (M) protein encoding DNA and a 480 bp
CC DNA fragment EB of the carboxyl-terminal part of the JEV envelope (E)
CC protein encoding DNA.

XX
XX Novel Japanese-encephalitis-virus antigen comprising Japanese-
XX encephalitis-virus-like particle consisting of M and E protein, useful as
XX Japanese-encephalitis vaccine.
XX
XX Claim 3; SEQ ID NO 4; 45pp; Japanese.
XX
XX The invention relates to a novel Japanese-encephalitis-virus antigen
XX comprising a Japanese-encephalitis-virus-like particle, which includes
XX the M protein and E protein of a Japanese encephalitis virus, and which
XX does not contain RNA in the particle, and shows haemagglutination
XX activity. The invention further comprises: a transformed cell obtained by
XX providing cDNA encoding the E protein and prM protein prepared from the
XX genome RNA of a Japanese-encephalitis virus, preparing a recombinant DNA
XX by integrating the cDNA in an expression vector which contains a beta-
XX actin promoter and which can be expressed, transforming an animal cell by
XX the recombinant DNA, selecting the transformed cell from a parent cell
XX and making the transformed cell to acclimatize in serum free medium;
XX Japanese-encephalitis-vaccine having immunity for the novel antigen and
XX containing the antigen as an active ingredient; and a diagnostic agent
XX which contains the antigen as an active ingredient. The Japanese-
XX encephalitis-virus antigen is useful for carrying out the preparation of
XX a Japanese-encephalitis vaccine and a diagnostic agent. This
XX polynucleotide sequence represents the Japanese-encephalitis-virus
XX encoding DNA of the invention.

XX virus, used as vaccine.
XX
XX Example 9; Fig 17; 117pp; English.
XX
XX cDNA was prepared from genomic virion RNA obtained from suspension
XX cultures of C6/36 cells infected with a passage 55 suckling mouse brain
XX stock of the Nagayama strain of JEV. EcoRI linkers were ligated to the
XX cDNA fragments for cloning into pBR322. Recombinant plasmids were
XX transformed into E.coli DH5 cells. Plasmid pC20 contained 81 non-coding
XX nucleotides and the coding regions for C and prM. Sequence AAQ22767 is
XX that of the C coding region of pC20, combined with an updated sequence of
XX the prM, E, NS1, NS2A and NS2B coding regions of the Nagayama strain. The
XX sequence begins at the C protein Met initiation codon. A subfragment of
XX pC20 was cloned into pUC18 to give pDr20. This plasmid was then used in
XX the construction of novel recombinants JEV24, JEV27, JEV33 and JEV34.
XX These were transfected into VP410 infected cells to generate VP825,
XX VP829, VP857 and VP864, respectively

XX
XX Nucleic acid of Japanese encephalitis virus - used for producing
XX polypeptide(s) and in the diagnosis of and immunisation against the
XX virus.
XX
XX Claim 4; Fig 5/1-5/5; 52pp; English.
XX
XX Substantially purified nucleic acid comprising at least a 10 bp sequence
XX of DNA corresponding to the nucleic acid sequence of JEV but not to the
XX nucleic acid sequence of yellow fever virus wherein the 10 bp sequence is
XX included within the sequence shown in AAN80297. Pref. the nucleic acid
XX sequences do not correspond to those found in yellow fever virus, West
XX Nile virus, Murray valley fever virus, dengue virus or St Louis
XX encephalitis virus. The nucleic acid may be obtd. from the virus and
XX inserted into a vector. Specific probes can be derived from this nucleic
XX acid. Also claimed are a pure polypeptide synthesized from the purified
XX nucleic acid and antibodies produced to the polypeptide. The polypeptides
XX and nucleic acid prods. are used in the diagnosis of and immunisation
XX against JEV. Inoculation of animals with synthetic viral protein
XX immunogens or with active vectors encoding such immunogens, elicits
XX protective antiviral antibodies. The vaccination induces immunity to the
XX disease caused by other flaviviruses. (Updated on 25-MAR-2003 to correct
XX PA field.) (Updated on 25-MAR-2003 to correct PI field.)

XX
XX Predicting toxic effects of compounds or the progression of these toxic
PT effects by determining the changes in gene expression in tissues or cells
PT exposed to the toxin and comparing these to gene expression in unexposed
PT tissues or cells.
XX
XX Claim 1; SEQ ID NO 76; 239pp; English.
XX
XX The invention relates to methods for predicting toxic effects of
CC compounds or the progression of these toxic effects by determining the
CC global changes in gene expression in tissues or cells exposed to the
CC toxin and comparing these to gene expression in unexposed tissues or
CC cells. Also included are methods of predicting at least one toxic effect
CC of a compound or progression of a toxic effect, preferably the
CC hepatotoxicity of a compound, comprising detecting the level of
CC expression in a tissue or cell sample exposed to the compound of two or
CC more genes listed in the specification, where differential expression of
CC the genes is indicative of at least one toxic effect or progression. The
CC method can also be used to identify an agent which modulates the toxic
CC response and predict cellular pathways that a compound modulates in a
CC cell. The methods utilise a set of at least two probes (on a solid
CC support in kit form), where each of the probes comprises a sequence that
CC specifically hybridises to a gene listed in the specification, a computer
CC system comprising a database containing information identifying the
CC expression level in a tissue or cell sample exposed to a hepatotoxin of a
CC set of genes comprising at least two genes listed in the specification,
CC and a user interface to view the information used to present information
CC identifying the expression level in a tissue or cell of at least one gene
CC listed in the specification. The method is useful for elucidating global
CC changes in gene expression and for identifying toxicity markers in
CC tissues or cell exposed to a known toxin. The genes may be used as
CC toxicity markers in drug screening and toxicity assays. The genes and
CC gene expression information may be used as diagnostic markers for the
CC prediction or identification of the physiological state of tissue or cell
CC sample that has been exposed to a compound or agent. Hepatotoxicity is
CC characterised by centrilobular necrosis and steatosis. The present
CC sequence is an expressed sequence tag (EST) or cDNA derived from a gene
CC which is differentially expressed in response to a hepatotoxic agent

XX
XX Predicting a toxic effect of a compound, useful in identifying toxicity
PT markers in liver tissues or cells for drug screening and toxicity assays,
PT comprises preparing gene expression profile of tissue or cells exposed to
PT the compound.
XX
XX Claim 1; SEQ ID NO 181; 1156pp; English.
XX
XX The present invention relates to a method for predicting a toxic effect
CC of a compound. The method comprises preparing a gene expression profile
CC of a tissue or cell sample exposed to the compound, and comparing the
CC gene expression profile to a database comprising SEQ ID 1-4925, where
CC differential expression of the gene indicates at least one toxic effect.
CC The method is useful for predicting at least one toxic effect of a
CC compound, predicting hepatotoxicity or the progression of a toxic effect
CC of a compound, identifying an agent that modulates the onset or
CC progression of a toxic response, predicting the cellular pathways that a
CC compound modulates in a cell, and identifying an agent that modulates at
CC least one activity of a protein. The method and compositions of the
CC present invention using a database of genes having liver toxin-induced
CC differential expression, are useful in identifying toxicity markers in
CC liver tissues or cells for drug screening and toxicity assays. Note: The
CC sequence data for this patent did not form part of the printed
CC specification, but was obtained in electronic format directly from WIPO
CC at ftp.wipo.int/pub/published_pct_sequences.

XX
XX Combination for diagnosing, staging, treating, or monitoring the
XX progression of treatment of a vascular disease, e.g. atherosclerosis,
XX PT comprises several cDNAs that are differentially expressed in activated
XX PT vascular tissue.
XX
XX Claim 1; Page; 18pp; English.
XX
XX This invention relates to a combination comprising several cDNAs that are
XX differentially expressed in activated vascular tissue. The invention also
XX CC discloses a high throughput method for detecting differentially expressed
XX CC cDNAs in a sample. The cDNAs of the invention may have
XX CC antiarteriosclerotic; cytostatic; cardiac; hypotensive; antidiabetic;
XX CC gynaecological; vasotropic and cerebroprotective activities and may be
XX CC used in gene therapy. The cDNAs of the invention may be used in a high-
XX CC throughput methods for detecting differential expression of one or more
XX CC cDNAs in a sample, or screening several molecules or compounds to
XX CC identify a molecule or compound that specifically binds a cDNA of the
XX CC invention. A protein encoded by the cDNA may be used to screen several
XX CC molecules or compounds to identify a ligand that specifically binds to
XX CC the protein, or to produce or purify an antibody to the protein that can
XX CC be used to detect a protein in a sample or purify a natural or
XX CC recombinant protein from a sample. The nucleotides may be useful for
XX CC diagnosing, staging, treating, or monitoring the progression of treatment
XX CC of a vascular disease, e.g. atherosclerosis, cancer, coronary artery
XX CC disease, hypertension, diabetes, pre-eclampsia, ischaemia- reperfusion
XX CC injury, retinosis, or stroke. The cDNAs can also be used for large-scale
XX CC genetic or gene expression analysis of several new nucleic acid
XX CC molecules. Antibodies to the proteins encoded by the cDNAs are useful for
XX CC diagnosing pre-pathologic disorders, and chronic or acute disease
XX CC associated with abnormalities in the expression, amount or distribution
XX CC of the protein. The present sequence represents a cDNA of the invention
XX CC that is differentially expressed in activated vascular tissue. Note: The
XX CC sequence data for this patent did not form part of the specification, but
XX CC was obtained in electronic format directly from USPTO at
XX CC http.seqdata.uspto.gov/sequence.html?DocID=20020137081

XX
XX New genes regulated by MYCN activation, useful in gene therapy,
XX particularly for treating a subject with e.g. neuroblastoma or other
XX cancers, or for diagnosing, staging or monitoring the treatment of the
XX cancer.
XX
XX Claim 1; SEQ ID NO 304; 27pp; English.
XX
XX This invention relates to novel isolated cDNAs that are differentially
XX expressed in MYCN activated cells. Specifically, it refers to
XX CC polynucleotide sequences that exhibit differential expression patterns in
XX CC cells activated by the transactivator MYCN, where MYCN is a proto-
XX CC oncogene that is amplified in neuroblastoma cells and is common in small
XX CC cell lung cancers. The present invention describes these cDNA molecules
XX CC as useful for in hybridisation assays to detect expression of nucleic
XX CC acids (or complementary nucleic acids) in a present in a given sample, as
XX CC well as for screening assays by identifying molecules or compounds that
XX CC specifically bind the cDNA as a ligand and modulate function or activity.
XX CC Accordingly, these compositions exhibit cytostatic activity and can also
XX CC be used for gene therapy purposes. This polynucleotide sequence is a cDNA
XX CC that is differentially expressed in MYCN activated cells, given in an
XX CC exemplification of the invention. NOTE: This sequence does not appear in
XX CC the printed specification but has been obtained in electronic format from
XX CC the US Patent Office at
XX CC ftp.seqdata.uspto.gov/sequence.html?DocID=20030119009.

XX (HUMA-) HUMAN GENOME SCI INC.
PA Rosen CA, Barash SC, Ruben SM;
XX WPI; 2001-565190/63.
XX Nucleic acid encoding novel connective tissue associated polypeptides,
PT used in diagnosing, preventing, treating or ameliorating a disorder such
PT as cancer or rheumatoid arthritis.
XX Disclosure; SEQ ID NO 1313; 673pp; English.
XX The present invention relates to the isolation of novel human connective
CC tissue related polypeptides (AAU86435-AAU86923) and the polynucleotide
CC (cDNA and genomic) sequences encoding them. The sequences of the
CC invention are useful in the diagnosis, treatment, prevention and/or
CC prognosis of diseases associated with connective tissue(s), including
CC cancer. The polynucleotide sequences of the invention are also useful in
CC gene therapy. ABK42102-ABK43116 represent genomic sequences encoding the
CC novel human connective tissue related polypeptides. Note: The sequence
CC data for this patent did not form part of the printed specification, but
CC was obtained in electronic format directly from WIPO at
CC ftp.wipo.int/pub/published_pct_sequences

XX (HUMA-) HUMAN GENOME SCI INC.

XX Rosen CA, Ruben SM, Barash SC;

XX WPI; 2003-634869/60.

DR P-PSDB; ADB59454.

XX New connective tissue-related polypeptides and polynucleotides, useful
PT for treating, preventing and/or prognosing e.g. disorders of connective
PT tissue, (e.g. rheumatoid arthritis), cancers, cancer metastases and/or
PT neoplasias.

XX Disclosure; SEQ ID NO 1313; 248pp; English.

XX The invention describes an isolated nucleic acid molecule (I), which
XX comprises a sequence that is at least 95 % identical to a connective
XX tissue-related polynucleotide encoding connective tissue antigens (CTA).
XX The polypeptide or polynucleotide is useful for preventing, treating, or
XX ameliorating medical conditions in a mammal. The connective tissue
XX polypeptides, polynucleotides and antibodies are particularly useful for
XX treating, preventing and/or prognosing disorders of connective tissues
XX (e.g. rheumatoid arthritis, discoid and systemic lupus erythematosus,
XX scleroderma, or Sjogren's syndrome), cancers, cancer metastases and/or
XX neoplasias (e.g. leukaemia), neurodegenerative disorders (e.g.
XX Alzheimer's disease, or Parkinson's disease), cardiovascular diseases
XX (e.g. atherosclerosis, myocarditis or cardiopulmonary bypass
XX complications), autoimmune diseases (e.g. systemic lupus erythematosus,
XX rheumatoid arthritis, or multiple sclerosis), allergic reactions (e.g.

PT genes from Drosophila and for elucidating cell signaling and cell-cell
PT interactions.
XX
PS Claim 1; SEQ ID NO 2701; 21pp + Sequence Listing; English.
XX
CC The invention relates to an isolated nucleic acid detection reagent
CC capable of detecting 1000 or more genes from Drosophila. The invention is
CC useful in developmental biology and in elucidating cell signalling and
CC cell-cell interactions in higher eukaryotes for the development of
CC insecticides, therapeutics and pharmaceutical drugs. The invention
CC discloses genomic DNA sequences (ABLI16176-ABLI30511), expressed DNA
CC sequences (ABLI01840-ABLI6175) and the encoded proteins (ABBS57737-
CC ABB72072). The sequence data for this patent did not form part of the
CC printed specification, but was obtained in electronic format directly
CC from WIPO at ftp.wipo.int/pub/published_pct_sequences

XX diagnostic, forensic, gene therapy and chromosome mapping procedures.
XX
```

```
XX Claim 1; SEQ ID NO 20939; 71pp + Sequence Listing; English.
XX
XX The present sequence is one of a large number of 5' ESTs derived from
XX mRNAs encoding secreted proteins. No ORF has yet been conclusively
XX identified within the present sequence. The 5' ESTs were prepared from
XX total human RNAs or polyA+ RNAs derived from 30 different tissues. EST
XX sequences usually correspond mainly to the 3' untranslated region (UTR)
XX of the mRNA because they are often obtained from oligo-dT primed cDNA
XX libraries. Such ESTs are not well suited for isolating cDNA sequences
XX derived from the 5' ends of mRNAs and even in those cases where longer
XX cDNA sequences have been obtained, the full 5' UTR is rarely included. 5'
XX ESTs are derived from mRNAs with intact 5' ends and can therefore be used
XX to obtain full length cDNAs and genomic DNAs. 5' ESTs are also used in
XX diagnostic, forensic, gene therapy and chromosome mapping procedures.
XX They are used to obtain upstream regulatory sequences and to design
XX expression and secretion vectors

PT New nucleic acid that is a 5' expressed sequence tag (5' EST) for
PT obtaining cDNAs and genomic DNAs that correspond to 5'ESTs and for
PT diagnostic, forensic, gene therapy and chromosome mapping procedures.
XX
PS Claim 1; SEQ ID NO 32761; 71pp + Sequence Listing; English.
XX
CC The present sequence is one of a large number of 5' ESTs derived from
CC mRNAs encoding secreted proteins. No ORF has yet been conclusively
CC identified within the present sequence. The 5' ESTs were prepared from
CC total human RNAs or polyA+ RNAs derived from 30 different tissues. EST
CC sequences usually correspond mainly to the 3' untranslated region (UTR)
CC of the mRNA because they are often obtained from oligo-dT primed cDNA
CC libraries. Such ESTs are not well suited for isolating cDNA sequences
CC derived from the 5' ends of mRNAs and even in those cases where longer
CC cDNA sequences have been obtained, the full 5' UTR is rarely included. 5'
CC ESTs are derived from mRNAs with intact 5' ends and can therefore be used
CC to obtain full length cDNAs and genomic DNAs. 5' ESTs are also used in
CC diagnostic, forensic, gene therapy and chromosome mapping procedures.
CC They are used to obtain upstream regulatory sequences and to design
CC expression and secretion vectors

XX
XX New recombinant DNA construct comprising a promoter positioned to provide
XX for expression of a polynucleotide encoding a polypeptide from a
XX microbial source, useful for producing plants with improved properties.
XX
XX Claim 1; SEQ ID NO 36568; 122pp; English.
XX
XX The invention relates to a recombinant DNA construct comprising a
XX promoter functional in a plant cell, where the promoter is positioned to
XX provide for expression of a polynucleotide encoding a polypeptide from a
XX microbial source. The invention also relates to a transformed plant
XX comprising the recombinant DNA construct and a method of producing a
XX transformed plant having an improved property. The plant is a crop plant
XX such as maize or soybean. The method of producing a transformed plant
XX having an improved property comprises transforming a plant with the
XX recombinant DNA construct and growing the transformed plant, where the
XX polynucleotide or polypeptide is useful for improving plant properties.
XX The recombinant DNA construct is useful for producing plants with
XX improved plant properties, e.g. improved cold, heat or drought tolerance,
XX tolerance to herbicides, extreme osmotic conditions, pathogens or pests,
XX increased resistance to plant disease, better growth rate by modification
XX of the cell cycle pathway with plant growth regulators, increased rate of
XX homologous recombination, modified seed oil or protein yield and/or
XX content, improved yield by modification of carbohydrate, nitrogen or by
XX phosphorus use and/or uptake, by modification of photosynthesis or by
XX providing improved plant growth and development under at least one stress
XX condition, improved lignin production or improved galactomannan
XX production. This sequence represents a bacterial polynucleotide used in
XX the scope of the invention. Note: The sequence data for this patent did
XX not form part of the printed specification but was obtained in electronic
XX format from USPTO at seqdata.uspto.gov/sequence.html.

XX
XX Novel isolated nucleic acid molecules (markers) overexpressed in ovarian
XX cancer cells as compared to their normal non-cancerous ovarian cells are
XX used to characterize stage, grade, histological type of ovarian cancer.
XX
XX Disclosure; SEQ ID NO 3621; 106pp; English.
XX
XX The invention relates to nucleic acid markers which are overexpressed in
XX ovarian cancer cells as compared to their expression in normal (i.e. non-
XX cancerous) ovarian cells. The invention also relates to polypeptides
XX encoded by the markers, antibodies that selectively bind to the
XX polypeptides, a method of inhibiting ovarian cancer in a patient at risk
XX of developing ovarian cancer involving inhibiting expression of a gene
XX corresponding to a marker of the invention and a method of treating a
XX patient afflicted with ovarian cancer comprising providing to cells of
XX the patient an antisense oligonucleotide complementary to a marker of the
XX invention. The markers are useful for assessing if a patient is afflicted
XX with ovarian cancer, which involves comparing the level of expression of
XX a marker in a patient sample and a normal level of expression of the
XX marker in a control non-ovarian cancer sample. A difference between the
XX expression levels indicates ovarian cancer. The level of expression of a
XX marker corresponds to a secreted protein or to a transcribed
XX polynucleotide or its portion. The level of expression of the marker is
XX assessed by detecting the presence in the sample, a protein or protein
XX fragment corresponding to the marker. The presence of protein or protein
XX fragment is detected using an antibody that specifically binds with the
XX protein or protein fragment. Alternatively, the level of expression of
XX the marker is assessed by detecting the presence of a transcribed
XX polynucleotide which anneals with the marker or anneals with a portion of
XX the polynucleotide comprising the marker under stringent conditions. The
XX marker is also used for monitoring the progression of ovarian cancer in a
XX patient which involves detecting expression of the marker in a patient
XX sample at a first point in time, repeating the method at a subsequent
XX time and comparing the level of expression. The method is carried out
XX using an ovarian tissue sample. A composition comprising a marker,
XX polypeptide or antibody of the invention is used to treat ovarian cancer.
XX This sequence represents a human ovarian cancer DNA marker of the
XX invention. Note: The sequence data for this patent did not form part of
XX the printed specification, but was obtained in electronic format directly
XX from WIPO at ftp.wipo.int/pub/published_pct_sequences.

XX PT Novel isolated nucleic acid molecules (markers) overexpressed in ovarian
XX cancer cells as compared to their normal non-cancerous ovarian cells are
XX used to characterize stage, grade, histological type of ovarian cancer.

XX PS Disclosure; SEQ ID NO 10499; 106pp; English.

XX CC The invention relates to nucleic acid markers which are overexpressed in
XX ovarian cancer cells as compared to their expression in normal (i.e. non-
XX cancerous) ovarian cells. The invention also relates to polypeptides
XX encoded by the markers, antibodies that selectively bind to the
XX polypeptides, a method of inhibiting ovarian cancer in a patient at risk

of detecting ovarian cancer involving inhibiting expression of a gene corresponding to a marker of the invention and a method of treating a patient afflicted with ovarian cancer comprising providing to cells of the patient an antisense oligonucleotide complementary to a marker of the invention. The markers are useful for assessing if a patient is afflicted with ovarian cancer, which involves comparing the level of expression of a marker in a patient sample and a normal level of expression of the marker in a control non-ovarian cancer sample. A difference between the expression levels indicates ovarian cancer. The level of expression of a marker corresponds to a secreted protein or to a transcribed polynucleotide or its portion. The level of expression of the marker is assessed by detecting the presence in the sample, a protein or protein fragment corresponding to the marker. The presence of protein or protein fragment is detected using an antibody that specifically binds with the protein or protein fragment. Alternatively, the level of expression of the marker is assessed by detecting the presence of a transcribed polynucleotide which anneals with the marker or anneals with a portion of the polynucleotide comprising the marker, under stringent conditions. The marker is also used for monitoring the progression of ovarian cancer in a patient which involves detecting expression of the marker in a patient sample at a first point in time, repeating the method at a subsequent time and comparing the level of expression. The method is carried out using an ovarian tissue sample. A composition comprising a marker, polypeptide or antibody of the invention is used to treat ovarian cancer. This sequence represents a human ovarian cancer DNA marker of the invention. Note: The sequence data for this patent did not form part of the printed specification, but was obtained in electronic format directly from WIPO at ftp.wipo.int/pub/published/pct sequences.

PT	Novel isolated nucleic acid molecules (markers) overexpressed in ovarian cancer cells as compared to their normal non-cancerous ovarian cells are used to characterize stage, grade, histological type of ovarian cancer.
PT	Disclosure; SEQ ID NO 4193; 106pp; English.
XX	The invention relates to nucleic acid markers which are overexpressed in ovarian cancer cells as compared to their expression in normal (i.e. non-cancerous) ovarian cells. The invention also relates to polypeptides encoded by the markers, antibodies that selectively bind to the polypeptides, a method of inhibiting ovarian cancer in a patient at risk of developing ovarian cancer involving inhibiting expression of a gene corresponding to a marker of the invention and a method of treating a patient afflicted with ovarian cancer comprising providing to cells of the patient an antisense oligonucleotide complementary to a marker of the invention. The markers are useful for assessing if a patient is afflicted with ovarian cancer, which involves comparing the level of expression of a marker in a patient sample and a normal level of expression of the marker in a control non-ovarian cancer sample. A difference between the expression levels indicates ovarian cancer. The level of expression of a marker corresponds to a secreted protein or to a transcribed polynucleotide or its portion. The level of expression of the marker is assessed by detecting the presence of a transcribed polynucleotide which anneals with the marker or anneals with a portion of the polynucleotide comprising the marker, under stringent conditions. The marker is also used for monitoring the progression of ovarian cancer in a patient which involves detecting expression of the marker in a patient sample at a first point in time, repeating the method at a subsequent time and comparing the level of expression. The method is carried out using an ovarian tissue sample. A composition comprising a marker, polypeptide or antibody of the invention is used to treat ovarian cancer. This sequence represents a human ovarian cancer DNA marker of the invention. Note: The sequence data for this patent did not form part of the printed specification, but was obtained in electronic format directly from WIPO at ftp.wipo.int/pub/published_pct_sequences .

PS
XX
XX The invention relates to human and mouse G protein-coupled receptors
CC (GPCRs) and nucleic acids encoding them. The invention also relates to
CC sequences at least 90% identical to the GPCR proteins and nucleic acids
CC of the invention; methods of treating, preventing or diagnosing diseases
CC associated with GPCRs of the invention; methods of screening for
CC compounds useful in the treatment of GPCR-related diseases; a transgenic
CC mouse comprising a GPCR gene of the invention; a mouse comprising a
CC mutation in a GPCR transgene or in an endogenous GPCR gene; cells derived
CC from the transgenic mice; kits comprising several mice, each of which has
CC a mutation in a different GPCR gene of the invention; and kits comprising
CC probes which hybridise to GPCR polynucleotides of the invention. The
CC invention further discloses variants of the GPCR polypeptides and vectors
CC comprising a GPCR nucleic acid. The GPCR nucleic acids and proteins may
CC be used in the diagnosis, treatment or prevention of a wide variety of
CC diseases including neurological disorders (e.g., Alzheimer's disease,
CC depression, diabetic neuropathy, Parkinson's disease or schizophrenia);
CC disorders of the adrenal gland; disorders of the colon or intestine
CC (e.g., Crohn's disease, diarrhoea, food poisoning or irritable bowel
CC syndrome); cardiovascular disorders (e.g., angina, cardiac arrhythmia or
CC myocardial infarction); muscular disorders; blood disorders (e.g.,
CC anaemia or leukaemia); immune disorders (e.g., autoimmune disorders or
CC AIDS); bone and joint disorders (e.g., osteoarthritis, rheumatoid
CC arthritis, gout or osteoporosis); metabolic or nutritive disorders (e.g.,
CC

CC obesity, enzyme deficiency-related diseases or vitamin deficiency-related
CC diseases); and disorders of the kidney, liver, lung, breast, ovary,
CC uterus, prostate, testis, skin, stomach, pancreas, spleen, thymus and
CC thyroid (e.g., cancers). The present sequence represents a GPCR-encoding
CC nucleic acid of the invention. Note: The full sequence data for this
CC patent did not form part of the printed specification; those sequences
CC not shown were obtained in electronic format directly from WIPO at
CC ftp.wipo.int/pub/published_pct_sequences.

XX
PS Claim 1; SEQ ID NO 420; 28pp; English.
XX
CC The invention describes a combination comprising a number of cDNAs that
CC are differentially expressed in a liver treated with a toxin and are
CC selected from any of the 514 cDNAs listed in the specification, or their
CC complements. The combination is useful in diagnosing, staging or treating
CC a liver disorder (e.g. biliary cirrhosis, X-linked adrenoleukodystrophy,
CC Zellweger syndrome, hepatorenal syndrome, hepatitis or hepatocarcinoma),
CC in monitoring diagnostic and therapeutic applications, in detecting
CC metabolic and toxicological responses, and in elucidating drug mechanism
CC of action. This sequence represents a cDNA differentially expressed in
CC liver tissues in response to treatment with a toxin.

PT of a gene in a first soft tissue sample and a normal soft tissue sample
PT and comparing the gene expression, also useful in treating soft tissue
PT sarcoma.
XX
PS Example 2; SEQ ID NO 5576; 210pp; English.
XX
CC The invention relates to a novel method for detecting soft tissue sarcoma
CC which comprises obtaining a first soft tissue sample from an individual
CC and a normal soft tissue sample from the same or different individual,
CC determining the expression of a gene in both samples and comparing the
CC expression of the gene in both soft tissue samples, where a higher level
CC of protein expression in the first soft tissue sample indicates the
CC presence of soft tissue sarcoma. The method of the invention has
CC cytostatic applications and may be useful for detecting soft tissue
CC sarcoma, possibly via gene therapy or vaccine production. The nucleic
CC acid sequences may be useful in diagnostic and screening applications.
CC The current sequence is that of a human soft tissue sarcoma-upregulated
CC DNA of the invention. The current sequence is not shown within the
CC specification per se but was submitted in CD format by the inventor.

XX
XX New recombinant nucleic acid encoding carcinoma associated protein,
XX useful for preparing compositions for treating carcinomas.
XX
XX Claim 1; SEQ ID NO 1226; 245pp; English.
XX
XX The invention relates to recombinant carcinoma associated (CA) nucleic
XX acid sequences from mouse and human (ADA01482-ADA03094), and to
XX recombinant carcinoma associated proteins (CAP) encoded by them. The
XX invention also encompasses expression vectors and host cells comprising a
XX CA nucleic acid, a polypeptide (especially an antibody) that specifically
XX binds to the protein, and a biochip comprising CA nucleic acid or
XX fragments thereof. The sequences of the invention were identified using
XX oncogenic retroviruses, which insert into the genome of the host organism
XX at random. Many of these do not carry transduced host oncogenes or
XX pathogenic trans-acting viral genes, meaning that cancer incidence is a
XX direct consequence of the effects of proviral integration into host
XX protooncogenes. The CA nucleic acid sequences can be used to diagnose
XX carcinoma (especially breast cancer, prostate cancer, lymphoma or
XX leukaemia) or a propensity to carcinoma by determination of the sequence
XX of a CA gene, or by determination of CA gene expression in particular
XX tissues. CA nucleic acids, proteins and antibodies are also useful as
XX therapeutic agents and in screening and evaluating drug candidates. The
XX present sequence represents a specifically claimed human CA nucleic acid
XX sequence of the invention. Note: The complete sequence data for this
XX patent did not form part of the printed specification, but was obtained
XX in electronic format directly from WIPO at
XX ftp.wipo.int/pub/published_pct_sequences.

XX
XX Novel isolated nucleic acid molecules (markers) overexpressed in ovarian
XX cancer cells as compared to their normal non-cancerous ovarian cells are
XX used to characterize stage, grade, histological type of ovarian cancer.
XX
XX Disclosure; SEQ ID NO 19823; 106pp; English.

XX The invention relates to nucleic acid markers which are overexpressed in
XX ovarian cancer cells as compared to their expression in normal (i.e. non-
XX cancerous) ovarian cells. The invention also relates to polypeptides
XX encoded by the markers, antibodies that selectively bind to the
XX polypeptides, a method of inhibiting ovarian cancer in a patient at risk
XX of developing ovarian cancer involving inhibiting expression of a gene
XX corresponding to a marker of the invention and a method of treating a
XX patient afflicted with ovarian cancer comprising providing to cells of
XX the patient an antisense oligonucleotide complementary to a marker of the
XX invention. The markers are useful for assessing if a patient is afflicted
XX with ovarian cancer, which involves comparing the level of expression of
XX a marker in a patient sample and a normal level of expression of the
XX marker in a control non-ovarian cancer sample. A difference between the
XX expression levels indicates ovarian cancer. The level of expression of a
XX marker corresponds to a secreted protein or to a transcribed
XX polynucleotide or its portion. The level of expression of the marker is
XX assessed by detecting the presence in the sample; a protein or protein
XX fragment corresponding to the marker. The presence of protein or protein
XX fragment is detected using an antibody that specifically binds with the
XX protein or protein fragment. Alternatively, the level of expression of
XX the marker is assessed by detecting the presence of a transcribed
XX polynucleotide which anneals with the marker or anneals with a portion of
XX the polynucleotide comprising the marker, under stringent conditions. The
XX marker is also used for monitoring the progression of ovarian cancer in a

CC patient which involves detecting expression of the marker in a patient
CC sample at a first point in time, repeating the method at a subsequent
CC time and comparing the level of expression. The method is carried out
CC using an ovarian tissue sample. A composition comprising a marker,
CC polypeptide or antibody of the invention is used to treat ovarian cancer.
CC This sequence represents a human ovarian cancer DNA marker of the
CC invention. Note: The sequence data for this patent did not form part of
CC the printed specification, but was obtained in electronic format directly
CC from WIPO at ftp.wipo.int/pub/published_pct_sequences.

/note="Organ: Eye; Vector: pCMVSPORT6; A human iris
library (ix) was normalized by self-subtraction. One
portion of double stranded plasmid DNA representing the
library was linearized by NotI. This NotI digested library
was used as a template for biotinylated RNA synthesis
using SP6 RNA polymerase. Another portion of the double
stranded plasmid library was converted to single-stranded
circles in vitro using Gene II and Exonuclease III (Life
Technologies). Single-stranded DNA (1 mg) was hybridized
(Cot 500) with 41 mg of Bio-RNA and vector blocking
oligonucleotides. The hybridized Bio-RNA/ss-circles were
removed by streptavidin:phenol extraction. EST analysis
was performed on the library at the NIH Intramural
Sequencing Center (NISC)."

 /note="Organ: Liver; Vector: pCNS-D2; Site 1: EcoRI;
 Site 2: NotI; The poly (A)+ RNA was dephosphorylated with
 bacterial alkaline phosphatase (BAP) and then decapped
 with tabacco acid pyrophosphatase (TAP). The decapped
 intact mRNA was ligated with DNA-RNA linker including
 EcoRI site by treatment of T4 RNA ligase and the first
 strand cDNA was synthesized from oligo dT-selected mRNA by
 priming with dT-tailed vector. The dT-tailed vector was
 adjusted to have about 60nt. The cDNA vector was
 circularized with E. coli DNA ligase after digestion of
 EcoRI which site is also included in vector. An RNA strand
 converted to a DNA strand by Okayama-Berg method. The
 obtained cDNA vectors were used for transformation of
 competent cells E. coli Top10F by electroporation method.
 The cDNA libraries constructed by this method are
 full-length enriched cDNA library. After analyzing and
 sequencing about 2,000 - 3,000 colonies in original cDNA
 library, the abundant cDNAs were selected and amplified by
 PCR reaction using vector region primer including T7
 promoter as 5' primer and N(dT)14 as 3' primer. The PCR
 products were used as template for synthesis of
 biotinylated single stranded RNA by in vitro transcription
 reaction. The synthesized cDNA probes were hybridized with
 antisense single stranded cDNAs prepared from original
 library and incubated with avidin-gel. After removing
 DNA-RNA hybrids by centrifuge, the subtraced cDNA
 libraries were constructed by transformation of the
 remaining DNA into competent cells E. coli Top10F with
 electroporation method."

 /note="Organ: Liver; Vector: pcNS-D2; Site 1: EcoRI;
 Site 2: NotI; The poly (A)+ RNA was dephosphorylated with
 bacterial alkaline phosphatase (BAP) and then decapped
 with tabacco acid pyrophosphatase (TAP). The decapped
 intact mRNA was ligated with DNA-RNA linker including
 EcoRI site by treatment of T4 RNA ligase and the first
 strand cDNA was synthesized from oligo dt-selected mRNA by
 priming with dt-tailed vector. The dt-tailed vector was
 adjusted to have about 60nt. The cDNA vector was
 circularized with E. coli DNA ligase after digestion of
 EcoRI which site is also included in vector. An RNA strand
 converted to a DNA strand by Okayama-Berg method. The
 obtained cDNA vectors were used for transformation of
 competent cells E. coli Top10F, by electroporation method.
 The cDNA libraries constructed by this method are
 full-length enriched cDNA library."

                /note="Organ: Eye; Vector: pCMVSPORT6; RNA was extracted
                from dog cornea tissue. A directionally cloned cDNA
                library in the pCMVSPORT6 vector (Invitrogen) was
                constructed at Bioserve Biotechnology (Laurel MD)
                essentially following the protocols of the SuperScript
                Plasmid System, full details of which are contained in the
                manufacturer's instruction manual
                (http://www.lifetech.com/). First strand synthesis was
                carried out using a Not I primer-adaptor
                [5'-pGACTAGTTCTAGATCGGCGGCCGCTT15-3']. cDNA was
                cloned in Not I/Sal I sites. EST analysis was performed at
                the NIH Intramural Sequencing Center (NISC). Analyzed data
                available through http://neibank.nei.nih.gov."

  California, Irvine
  DNA Sequencing: DOE Joint Genome Institute: http://www.jgi.doe.gov
  Clone Distribution: I.M.A.G.E. Consortium/LLNL;
  http://image.llnl.gov
  Naming Conventions: EST name is generated by the concatenation of
  the JGI Clone id and the direction of sequencing. The suffix '.rev'
  indicates a reverse sequencing read of the insert. It does not
  necessarily reflect the orientation of the insert.
  Poly-A: Based upon the presence of a run of 14 or more T residues
  at the beginning of the sequence, this clone was polyadenylated.
  The resulting Poly-T sequence has been removed.
  Plate: CAAR 0025 row: h column: 8
  High quality sequence stop: 751
  POLYA=Yes.

The tag is a string of 3-5 nucleotides present between the Not I site and the oligo-dT track which allows identification of the library of origin of a clone within the mixture. The subtracted library (UI-R-E1) was constructed as follows: PCR amplified cDNA inserts from a pool of UI-R-E0 clones from which 3' ESTs had been derived was used as a driver in a hybridization with the UI-R-E0 library in the form of single-stranded circles. The remaining single-stranded circles (subtracted library) was purified by hydroxyapatite column chromatography, converted to double-stranded circles and electroporated into DH10B bacteria (Life Technologies) to generate the UI-R-E1 library. This procedure has been previously described (Bonaldo, Lennon and Soares, Genome Research 6: 791-806, 1996)."

The sequence tag present in the cDNA between the NotI site and the oligo-dT track served to identify it as a clone from the normalized adult 8-Day-Embryo library. cDNA Library Preparation: M. Fatima Bonaldo, Ph.D. Clone distribution: clones will be available through Research Genetics This clone is also available through the I.M.A.G.E. Consortium at LBNL (info@image.lbnl.gov). IMAGE ID=1772096 The following repetitive elements were found in this cDNA sequence: 1-37, >AT_richLow_complexity

Seq primer: M13 Forward

PolyA=No.

               The sequence contained an oligo-dT track that was present in the
               oligonucleotide that was used to prime the synthesis of first
               strand cDNA and therefore this may represent a bonafide poly A
               tail. The sequence tag present in the cDNA between the NotI site
               and the oligo-dT track served to identify it as a clone from the
               normalized cervix library cDNA Library Preparation: M.B. Soares Lab

                /clone_lib="UI-R-CNI"
                /note="Vector: p773D-PacI; Site 1: Not I; Site 2: Eco RI;
The UI-R-CNI library is a subtracted library derived from
the following pool of seven normalized rat libraries:
normalized rat seminal vesicles, normalized rat penis,
normalized rat bladder, normalized rat cervix, normalized
rat brown adipose, normalized rat fundus, and normalized
rat salivary gland. It was constructed according to the
procedure described by Bonaldo, Lennon & Soares (Genome
Research Genome 6: 791-806, 1996). For construction of
the CNI library, plasmid DNA from the pool of normalized
libraries was electroporated into competent bacteria for
the production of single-stranded circular DNA. This was
then used as a tracer in a subtractive hybridization with
a driver (PCR amplified inserts from a plamid DNA template
preparation) comprising: a) a pool of about 34,000 clones
from the Rat Unigene Set corresponding to plates R-5-AA-NN
excluding plates R-5-MM and MN. This pool represented 40%
of the final driver population. b) a pool of about 29,000
clones from subtracted libraries CA0 and CA1 corresponding
to plates R-CA0-AMV through R-CA0-AXS, R-CA0-AXZ through
R-CA0-BAZ, R-CA0-BFE through R-CA0-BHY, R-CA0-BJS,
R-CA0-BKE, R-CA0-BKG-H, R-CA0-BKJ-K, R-CA0-BKP through
R-CA0-BKS, R-CA0-BKU-V, R-CA0-BLY through R-CA0-BMA,
R-CA0-BMC through R-CA0-BME, R-CA0-BNS, R-CA0-BOB through
R-CA0-BOJ, R-CA0-BPA through R-CA0-BPG, R-CA1-BBA through
R-CA1-BDA, R-CA1-BHZ through R-CA1-BJF, R-CA1-BUR,
R-CA1-BVT through R-CA1-BKE, R-CA1-BXJ, R-CA1-BKF,
R-CA1-BKI, R-CA1-BKT, R-CA1-BLF, R-CA1-BLH through
R-CA1-BLN, R-CA1-BLS, R-CA1-BLU-V, R-CA1-BNR, and
R-CA1-BLE. The resulting pool represented 20% of the
final driver population. c) a pool of about 15,000 clones
from non-normalized libraries CS0s, CT0s, CU0s, CW0s, CX0s
and normalized libraries CS0, CT0, CU0, CW0, and CX0
corresponding to plates R-CS0s-CBD through R-CS0s-CBO,
R-CT0s-CCA through R-CT0s-CAX, R-CU0s-CBP through
R-CU0s-CCA, R-CW0s-CCB through R-CW0s-CCM, R-CX0s-CCN
through R-CX0s-CCX, R-CS0-BSD, R-CS0-BTD through
R-CS0-BTV, R-CS0-BVM, R-CT0-BTW through R-CT0-BUP,
R-CT0-BVN, R-CU0-BUQ through R-CU0-BVL, R-CW0-BVV through
R-CW0-BWP, R-CW0-BXN through R-CW0-BXO, R-CX0-BWQ through
R-CX0-BXM. The resulting pool represented 5% of the final
driver population. d) a pool of about 5,000 clones (1,000
from non-normalized eye library CV0 and 4,000 from
normalized eye library CV1) corresponding to plates
R-CV0-BRH through R-CV0-BRR, R-CV1-BRS through R-CV1-BSC,
R-CV1-BSE through R-CV1-BTC, and R-CV1-BVO through
R-CV1-BVU. This pool represented about 5% of the final
driver population. e) A pool of about 10,000 clones from
subtracted library BS2, BV0 and BV0p (7-9.5 kb cDNA
library fraction from rat whole embryo), and BX0 (0.5-7kb
cDNA library fraction from rat whole embryo) corresponding
to plates R-BS2-BDB through R-BS2-BFB, R-BV0-ANK through
R-BV0-ANR, R-BV0p-AOI through R-BV0p-AOX, and R-BX0-AOY
through R-BX0-ASH. The resulting pool represented 5% of
the final driver population. f) a pool of about 7,000
clones from the seven non-normalized libraries that make
up the tracer including CY0, CZ0, DA0, DB0, DC0, DD0, and
DE0 corresponding to plates R-CY0-BXP through R-CY0-BXZ,
R-CZ0-BYA through R-CZ0-BYI, R-CZ0-BZB-C, R-DA0-BYJ
through R-DA0-BYP, R-DA0-BZD through R-DA0-BZH, R-DB0-BYQ
through R-DB0-BZA, R-DC0-BZI through R-DC0-BZQ, R-DC0-CAY
through R-DC0-CBA, R-DD0-BZR through R-DD0-CAA,

```

R-DD0-CBB-C, and R-DE0-CAB through R-DE0-CAL. The resulting pool represented about 10% of the final driver population. g) a pool of about 2,000 clones from the pool of normalized libraries, CNO, that makes up the tracer. The corresponding plates are R-CNO-BKW through R-CNO-BLD, R-CNO-BLG, R-CNO-BLP through R-CNO-BLR, R-CNO-BLT, R-CNO-BLM-X, R-CNO-BMB, and R-CNO-BMF through R-CNO-BML. This pool represented 5% of the final driver population. h) a pool of the 28 most abundant clones in the CNO pool corresponding to the following addresses: bkw-a-09-0-UI, bkw-b-09-0-UI, bkw-b-11-0-UI, bkw-b-10-0-UI, bkw-d-01-0-UI, bkw-d-06-0-UI, bkw-g-08-0-UI, bkw-h-12-0-UI, bky-a-05-0-UI, bkr-a-06-0-UI, bkr-a-11-0-UI, bkz-c-06-0-UI, bkz-c-09-0-UI, bkz-d-10-0-UI, bla-a-01-0-UI, bla-a-02-0-UI, bla-f-04-0-UI, bla-g-07-0-UI, bla-g-12-0-UI, blb-a-12-0-UI, blb-f-02-0-UI, blc-a-11-0-UI, blc-e-95-0-UI, bld-1-08-0-UI, bld-f-02-0-UI, blg-h-04-0-UI, blr-a-03-0-UI, blt-f-08-0-UI. This pool represented 5% of the final driver population. i) One abundant CNO clone (corresponding to the address bkr-a-11-0-UI) was digested with Not I and Eco RI and the resulting insert was gel purified. This purified insert was added directly to the driver so that it represented 5% of the final driver population.

 /clone_lib="Mdft"
 /note="Vector: pBluescript II SK (+); Site 1: NotI;
 Site 2: EcoRI; Total RNA was extracted separately from
 each stage [young fruitlet (<1cm), young fruitlet (1 cm
 dia.), young fruitlet (12cm dia.), maturing fruit I,
 maturing fruit II, mature fruit], using the 'pine tree'
 method. Poly(A)+mRNA was isolated twice from total RNA
 from each stage using the Oligotex Direct mRNA kit
 (Qiagen). mRNA was reverse transcribed into double
 stranded cDNA using a modified oligo19(dT) primer with an
 identifying tag sequence (see table below). cDNA's from
 different stages were pooled in equal amounts before
 adaptor ligation. Tag identification when sequencing from
 5' end: Stage 1 (young fruitlet) insert 18(A)TCGTG; Stage
 2 (young fruitlet 1cm dia) insert 18(A)TCGTG; Stage 3
 (young fruitlet 12cm dia) insert 18(A)TCGTG; Stage 4
 (maturing fruitlet 1cm dia) insert 18(A)TCGTG; Stage 5
 (maturing fruitlet 12cm dia) insert 18(A)TCGTG; Stage 6
 (mature fruit) insert 18(A)TCGGA; Stage 7 (mature fruit) insert
 18(A)TCGTG; Tag identification when sequencing from 3',
 end: Stage 1 (young fruitlet) CACGA18(T) insert; Stage 2
 (young fruitlet 1cm dia) CACGA18(T) insert; Stage 3 (young
 fruitlet 12cm dia) ACGA18(T) insert; Stage 4 (maturing
 fruit I) TCGA18(T) insert; Stage 5 (maturing fruit II)
 TCGA18(T) insert; Stage 6 (mature fruit) ACGA18(T)
 insert. Double stranded cDNAs were size selected (more
 than 450 bp), adaptor with EcoRI adapters at both ends
 and then digested with NotI. The cDNAs were then
 directionally cloned into EcoRI-NotI digested pBS II SK(+) phagemid
 vector (Stratagene). Identification of adaptors and tags in 5'-end sequenced clones:
 (Vector) . . . TAAGTTC(End Vector) (Start
 EcoRI adaptor)GATATCGAATTCATTGTTGGG (End
 EcoRI adaptor) (Start Insert).
 Insert) (Start Tag)TCGGA(End Tag) (Start
 NotI site)Vector/CGGCCGCCACCGG. . . The total number of
 white colony forming units (cfu) in the primary library
 before amplification was 2.1x10⁶ cfu (colony forming
 units). The background of empty clones was less than 1%.
 Inserts ranged from 0.5kb to 4 kb, as determined by PCR.
 Purified plasmid DNA from the primary library was
 converted to single-stranded circles and used as a
 template for PCR amplification using the T7 and T3 priming
 sites flanking the cloned cDNA inserts. The purified PCR
 products, representing the entire cloned cDNA population,
 were used as a driver for normalization. Hybridization
 between the single-stranded library and the PCR products
 was carried out for 44 hours at 30C. Unhybridized
 single-stranded DNA circles were separated from hybridized
 DNA rendered partially double-stranded and electroporated

FEATURES

source

Young Fruitlet < 1 cm, using the method described by Wang and Vodkin (Plant Molecular Biology Reporter 12:132-145, 1994). Poly(A)⁺mRNA was isolated from total RNA using the polyAtract mRNA Isolation system III (Promega). The library was prepared using the Invitrogen Life Technologies, Superscript Plasmid System with gateway technology for cDNA Synthesis and cloning. Complementary DNA was synthesized from mRNA using a poly (dT) sequence with a NotI restriction site. Sal I linker adapters were ligated to the blunt ended cDNA fragments followed by restriction with NotI. The cDNA fragments were directionally cloned into the NotI-SalI restriction site of the pSPORT 1 vector. The ligated cDNA fragments were transformed into *E. coli* ElectroMax Dh10B host cells. Transformation efficiency: 10E+06 colony forming units. Average insert size by PCR: 992 bp "

insert; Stage 2 (active shoot internodes) CAGCA18(T)
insert; Stage 3 (actively-growing shoot internodes)
ACCGA18(T) insert; Double stranded cDNAs were size
selected (more than 450 bp), adapted with EcoRI adapters
at both ends and then digested with NotI. The cDNAs were
then directionally cloned into EcoRI-NotI digested pBS II
Sk(+) phagemid vector(Stratagene). Identification of
adaptors and tags in 5'-end sequenced clones:
(Vector)...TAGCTT(End Vector)(Start Insert)
EcoRI adaptor(GATATGAATTTCATTTGTTGGG (End
EcoRI adaptor)(Start Insert)...AAAAAAAAAAAAAA(End
Insert))(Start Tag)GCCGA(End Tag)(Start
NotI site/vector)GCCGCCACCACCCGG... The total number of
white colony forming units (cfu) in the primary library
before amplification was 2.7x107 cfu (colony forming
units). The background of empty clones was less than 2%.
Inserts ranged from 0.5kb to 4 kb, as determined by PCR.
Purified plasmid DNA from the primary library was
converted to single-stranded circles and used as a
template for PCR amplification using the T7 and T3 priming
sites flanking the cloned cDNA inserts. The purified PCR
products, representing the entire cloned cDNA population,
were used as a driver for normalization. Hybridization
between the single-stranded library and the PCR products
was carried out for 44 hours at 30C. Unhybridized
single-stranded DNA circles were separated from hybridized
DNA rendered partially double-stranded and electroporated
into DH10B cells to generate the normalized library. The
total number of clones with insert was 8x105 cfu.
Background of empty clones was less than 1%."

 /note="Organ: Lung; Vector: pYX-Asc; Site 1: Ecor I; Site 2: Not I; The library was constructed according to Bonaldo, Lennon and Soares, Genome Research, 6:791-806, 1996. Denatured RNA was size fractionated on a 1% agarose gel. First strand cDNA synthesis was primed with oligo-dt primer containing a Not I site. Double strand cDNA was size selected according to mRNA size fraction, ligated with Ecor I adaptor, digested with Not I and then cloned directionally into pYX-Asc vector. The library tag sequence located between the Not I site and the polyA tail is GATAGGCCA. Tissue was provided by Mary Hendrix."

Title: US-10-600-816-30

Perfect score: 42

Sequence: 1 gccacgctggccgagccc.....acaaagactgaagtaag 42

Scoring table: IDENTITY_NUC

Gapop 10.0 , Gapext 1.0

Searched: 18892170 seqs, 6143817638 residues

Total number of hits satisfying chosen parameters: 37784340

Minimum DB seq length: 0

Maximum DB seq length: 2000000000

Post-processing: Minimum Match 0%

Maximum Match 100%

Listing first 1000 summaries

Pred. No. is the number of results predicted by chance to have a score greater than or equal to the score of the result being printed, and is derived by analysis of the total score distribution.

Pred. No. is the number of results predicted by chance to have a score greater than or equal to the score of the result being printed, and is derived by analysis of the total score distribution.

Submitted (30-AUG-2002) Human Genome Sequencing Center, Department
of Molecular and Human Genetics, Baylor College of Medicine, One
Baylor Plaza, Houston, TX 77030, USA
On Sep 1, 1999 this sequence version replaced gi:5757565.
INFORMATION: <http://www.hgsc.bcm.tmc.edu/> or email
gc-help@bcm.tmc.edu
CLONE LENGTH: This sequence does not necessarily represent the
entire insert of this clone. Overlapping regions of clones are only
sequenced and submitted once, so the sequence for the remainder of
the insert may be found in the record for the adjacent clones.
Overlapping clones are noted at the beginning and end of the
Features listing.
ANNOTATION OF FEATURES:
STGs are identified using ePCR (Genome Res. 7:541-550) searches
of a local database that includes entries from dbSTS, GDB, and
local mapping efforts.
Repeats are identified using RepeatMasker (A. Smit and P. Green,
unpublished.) for Human and Mouse sequences.
Genes and Region of sequence similarity are identified by BLAST
(Nuc. Acids Res. 25:3389-3402) similarity (expect < 1e-34) to the
EST and cDNA sequences. Genes demonstrate at least two exons
flanked by consensus splice sites that maintained sequence
continuity across the splice junctions. Sequences that are not
identical matches are annotated as similar.
SEQUENCING READ COVERAGE: Sequencing is completed to a minimum
standard of double strand coverage with a minimum of 2 clones and 2
reads with no ambiguities or 2 chemistries with a minimum of 2
clones and 3 reads with no ambiguities. If the sequence quality for
a region does not meet this standard, it will be indicated in the
annotation as Low Coverage.
QUALITY OF INDIVIDUAL BASES: This sequence meets stringent quality
standards - estimated error rate less than 1 per 10,000 bases.
Reports of lowest quality individual bases and measures of base
quality are listed below. Description of the metrics can be found
at URL:
<http://gc.bcm.tmc.edu:8088/quality.info/genbank.annotation.html>.

Bovine Genome Sequencing Consortium
Direct Submission
Submitted (23-JAN-2006) Human Genome Sequencing Center, Department
of Molecular and Human Genetics, Baylor College of Medicine, One
Baylor Plaza, Houston, TX 77030, USA
On Jan 23, 2006 this sequence version replaced gi:71067167.
The sequence in this assembly is a combination of BAC based reads
and whole genome shotgun sequencing reads assembled using Atlas
(http://www.hgsc.bcm.tmc.edu/projects/rat/). Each contig described
in the feature table below represents a scaffold in the Atlas
assembly (a 'contig-scaffold'). Within each contig-scaffold,
individual sequence contigs are ordered and oriented, and separated
by sized gaps filled with Ns to the estimated size. The sequence
may extend beyond the ends of the clone and there may be sequence
contigs within a contig-scaffold that consist entirely of whole
genome shotgun sequence reads. Both end sequences and whole genome
shotgun sequence only contigs will be indicated in the feature
table.

----- Project Information
Center project name: FKHC
Center clone name: CH240-103F13
----- Summary Statistics
Assembly program: Atlas 3.0;
Consensus quality: 264399 bases at least Q40
Consensus quality: 267053 bases at least Q30
Consensus quality: 269711 bases at least Q20
Estimated insert size: 271703; sum-of-contigs estimation
Quality coverage: 6x in Q20 bases; sum-of-contigs estimation
-----
* NOTE: Estimated insert size may differ from sequence length
(see http://www.hgsc.bcm.tmc.edu/docs/Genbank_draft_data.html)
* NOTE: This sequence may represent more than one 'clone'.
* NOTE: This is a 'working draft' sequence. It currently
consists of 35 contigs. The true order of the pieces
is not known and their order in this sequence record is
arbitrary. Gaps between the contigs are represented as

```

* runs of N, but the exact sizes of the gaps are unknown.
* This record will be updated with the finished sequence
* as soon as it is available and the accession number will
* be preserved.

----- Genome Center

Center: NIH Intramural Sequencing Center

Center code: NISC

Web site: http://www.nisc.nih.gov

Contact: nisc_zoo@nhgri.nih.gov

----- Project Information

Center project name: lnj

Center clone name: 035017

The sequence data in this record represents an 'enhanced' version of a Phase 2 submission. Specifically, the indicated order and orientation of each sequence contig has been established using one or more of the following: read-pair data from individual subclones, overlaps with neighboring clones, alignment with available reference sequence (e.g., human), and/or confirmation by PCR testing. In addition, the sequence assembly is generally based on at least 8X average coverage in Q20 bases and has been reviewed to rule out gross misassemblies, the low-quality ends of sequence contigs have been trimmed away, and each base is associated with a Phrap-derived quality score.

----- Summary Statistics

Sequencing vector: plasmid; n/a; 100% of reads

Chemistry: Dye-terminator Big Dye; 100% of reads

Assembly program: Phrap; version 0.990319

Consensus quality: 172944 bases at least Q40

Consensus quality: 173403 bases at least Q30

Consensus quality: 173643 bases at least Q20

Insert size: 176000; agarose-fp

Insert size: 173798; sum-of-contigs

Quality coverage: 9.18x in Q20 bases; agarose-fp

Quality coverage: 9.29x in Q20 bases; sum-of-contigs

* NOTE: This is a 'working draft' sequence. It currently consists of 6 contigs. Gaps between the contigs are represented as runs of N. The order of the pieces is believed to be correct as given, however the sizes of the gaps between them are based on estimates that have been provided by the submitter.

* This sequence will be replaced

* by the finished sequence as soon as it is available and * the accession number will be preserved.

* 1 56412: contig of 56412 bp in length

* 56413 56512: gap of unknown length

* 56513 61819: contig of 5307 bp in length

* 61820 61919: gap of unknown length

* 61920 68051: contig of 6132 bp in length

* 68052 68151: gap of unknown length

            and Ikawa,Y.
            Complete nucleotide sequence of the genome of bovine leukemia
            virus: its evolutionary relationship to other retroviruses
            Proc. Natl. Acad. Sci. U.S.A. 82 (3), 677-681 (1985)
            2983308
            Original source text: Bovine leukemia virus RNA.
            The organization of the BLV genome is as follows: 5' LTR - gag -
            pol - env - pX-BL - 3' LTR, where pX-BL is a region containing
            several open reading frames.
            [1] suggests, based on the pattern of conservation in the pol
            region, that BLV and human T-cell leukemia virus (HTLV) constitute
            a separate group, designated type E, of Oncovirinae. The initiation
            of translation of the pol reading frame is undetermined. A
            potential splice acceptor (at 4391-4401) for the env mRNA is
            identified by similarity to the consensus sequence [1].

JOURNAL

COMMENT

This represents the February 3, 2003 version of the continually updated, reviewed, Pseudomonas aeruginosa PAO1 genome annotation, from PseudocAP (see <http://www.pseudomonas.com> for latest updates and links to alternate annotations). PseudocAP is coordinated by Fiona S.L. Brinkman (Simon Fraser University, Canada) and Robert E.W. Hancock (University of British Columbia, Canada). We welcome submission through www.pseudomonas.com of any proposed changes.

'Protein name confidence' is used to rate our confidence of the accuracy of the protein name.

Class 1: Function experimentally demonstrated in P. aeruginosa.

Class 2: Function of highly similar gene experimentally demonstrated in another organism (and gene context consistent in terms of pathways its involved in, if known).

Class 3: Function proposed based on presence of conserved amino acid motif, structural feature or limited sequence similarity to an experimentally studied gene.

Class 4: Homologs of previously reported genes of unknown function, or no similarity to any previously reported sequences.

TITLE Direct Submission
JOURNAL Submitted (17-JUN-2004) Wellcome Trust Sanger Institute, Hinxton,
Cambridgeshire, CB10 1SA, UK. E-mail enquiries:
humquery@sanger.ac.uk Clone requests: clonerequest@sanger.ac.uk
On Jun 18, 2004 this sequence version replaced gi:48639588.
Sequence from the Mouse Genome Sequencing Consortium whole genome
shotgun may have been used to confirm this sequence. Sequence data
from the whole genome shotgun alone has only been used where it has
a phred quality of at least 30.
----- Genome Center
Center: Wellcome Trust Sanger Institute
Center code: SC
Web site: http://www.sanger.ac.uk
Contact: humquery@sanger.ac.uk
-----
During sequence assembly data is compared from overlapping clones.
Where differences are found these are annotated as variations
together with a note of the overlapping clone name. Note that the
variation annotation may not be found in the sequence submission
corresponding to the overlapping clone, as we submit sequences with
only a small overlap as described above.
This sequence was finished as follows unless otherwise noted: all
regions were either double-stranded or sequenced with an alternate
chemistry or covered by high quality data (i.e., phred quality >=
30); an attempt was made to resolve all sequencing problems, such
as compressions and repeats; all regions were covered by at least
one plasmid subclone or more than one M13 subclone; and the
assembly was confirmed by restriction digest, except on the rare
occasion of the clone being a YAC.
The following abbreviations are used to associate primary accession
numbers given in the feature table with their source databases:
Em, EMBL; Sw, SWISSPROT; Tr, TrEMBL; Wp, WORMPEP; Information
on the WORMPEP database can be found at
http://www.sanger.ac.uk/Projects/C_elegans/wormpep/RP24-276N4 is
from a Male (C57BL/6J) mouse BAC Library VECTOR: pTARBAC1.

This sequence was finished as follows unless otherwise noted: all regions were either double-stranded or sequenced with an alternate chemistry or covered by high quality data (i.e., phred quality >= 30); an attempt was made to resolve all sequencing problems, such as compressions and repeats; all regions were covered by at least one subclone; and the assembly was confirmed by restriction digest, except on the rare occasion of the clone being a YAC.

COMMENT
Cambridgeshire, CB10 1SA, UK. E-mail enquiries: vegas@sanger.ac.uk
Clone requests: clonerequests@sanger.ac.uk
On Mar 29, 2002 this sequence version replaced gi:19808178.
The following abbreviations are used to associate primary accession numbers given in the feature table with their source databases:
Em: EMBL; Sw: SWISSPROT; Tr: TrEMBL; Wp: WORMPEP; Information on the WORMPEP database can be found at
http://www.sanger.ac.uk/Projects/C_elegans/wormpep
XXbac-254F23 is from a CHORI-501 human bac - PGF cell line library VECTOR: pTARBAC2.1
This sequence was generated from part of bacterial clone contigs constructed by the MHC Haplotype Consortium and collaborators. Further information can be found at
http://www.sanger.ac.uk/HGP/Chr6/MHC
----- Genome Center
Center: Wellcome Trust Sanger Institute
Center code: SC
Web site: http://www.sanger.ac.uk
Contact: vegas@sanger.ac.uk

This sequence was finished as follows unless otherwise noted: all regions were either double-stranded or sequenced with an alternate chemistry or covered by high quality data (i.e., phred quality >= 30); an attempt was made to resolve all sequencing problems, such as compressions and repeats; all regions were covered by at least one subclone; and the assembly was confirmed by restriction digest, except on the rare occasion of the clone being a YAC.

Summary Statistics
Consensus quality: 141126 bases at least Q40
Consensus quality: 145414 bases at least Q30
Consensus quality: 147452 bases at least Q20
Estimated insert size: 171000; agarose-fp estimation
Estimated insert size: 148672; sum-of-contigs estimation
Quality coverage: 11.15 in Q20 bases; agarose-fp estimation
Quality coverage: 12.83 in Q20 bases; sum-of-contigs estimation.
* NOTE: This is a 'working draft' sequence. It currently
* consists of 18 contigs. Gaps between the contigs
* are represented as runs of N. The order of the pieces
* is believed to be correct as given, however the sizes
* of the gaps between them are based on estimates that have
* provided by the submitter.
* This sequence will be replaced
* by the finished sequence as soon as it is available and
* the accession number will be preserved.

Direct Submission
Submitted (24-JAN-2006) Human Genome Sequencing Center, Department
of Molecular and Human Genetics, Baylor College of Medicine, One
Baylor Plaza, Houston, TX 77030, USA
On Jan 24, 2006 this sequence version replaced gi:77377088.
The sequence in this assembly is a combination of BAC based reads
and whole genome shotgun sequencing reads assembled using Atlas
(http://www.hgsc.bcm.tmc.edu/projects/rat/). Each contig described
in the feature table below represents a scaffold in the Atlas
assembly (a 'contig-scaffold'). Within each contig-scaffold,
individual sequence contigs are ordered and oriented, and separated
by sized gaps filled with Ns to the estimated size. The sequence
may extend beyond the ends of the clone and there may be sequence
contigs within a contig-scaffold that consist entirely of whole
genome shotgun sequence reads. Both end sequences and whole genome
shotgun sequence only contigs will be indicated in the feature
table.

COMMENT

On Dec 20, 2001 this sequence version replaced gi:17221178.
 The following abbreviations are used to associate primary accession
 numbers given in the feature table with their source databases:
 Em, EMBL; Swi, SWISSPROT; Tr, TrEMBL; Wp, WORMPEP; Information
 on the WORMPEP database can be found at
http://www.sanger.ac.uk/Projects/C_elegans/wormpep This sequence
 was generated from part of bacterial clone contigs of human
 chromosome 10, constructed by the Sanger Centre Chromosome 10
 Mapping Group. Further information can be found at
<http://www.sanger.ac.uk/HGP/Chr10>
 RP11-714M16 is from the library RPCI-11.3 constructed by the group
 of Pieter de Jong. For further details see
<http://www.chori.org/bacpac/home.htm>
 VECTOR: pBAC3.6

This sequence was finished as follows unless otherwise noted: all
 regions were either double-stranded or sequenced with an alternate
 chemistry or covered by high quality data (i.e., phred quality >=
 30); an attempt was made to resolve all sequencing problems, such
 as compressions and repeats; all regions were covered by at least
 one subclone; and the assembly was confirmed by restriction digest,
 except on the rare occasion of the clone being a YAC.

Web site: <http://www.sanger.ac.uk>
 Contact: vega@sanger.ac.uk

 This sequence was finished as follows unless otherwise noted: all regions were either double-stranded or sequenced with an alternate chemistry or covered by high quality data (i.e., phred quality >= 30); an attempt was made to resolve all sequencing problems, such as compressions and repeats; all regions were covered by at least one subclone; and the assembly was confirmed by restriction digest, except on the rare occasion of the clone being a YAC.

-----

NOTICE:
This sequence was finished as follows unless otherwise noted:
all regions were double stranded, sequenced with an alternate
chemistry, or covered by high quality data (i.e., phred quality >=
30); an attempt was made to resolve all sequencing problems, such
as compressions and repeats; all regions were covered by sequence
from more than one subclone; and the assembly was confirmed by
restriction digest.

MAPPING INFORMATION:
Mapping information for this clone was provided by Dr. Wes Warren,
Department of Genetics, Washington University, St. Louis MO. For
additional information about the map position of this sequence, see
http://genome.wustl.edu

SOURCE INFORMATION:
The RPCI-11 human BAC library was made from the blood of one male
donor, as described by Osoegawa, K., Woon, P.Y., Zhao, B., Frengen, E.,
Tateno, M., Catanese, J.J. and de Jong, P.J. (1998) An improved
approach for construction of bacterial artificial chromosome
libraries. Genomics 51:1-8. The clone may be obtained either from
Research Genetics, Inc. (http://www.resgen.com) or Pieter de Jong
and coworkers at http://www.chori.org
VECTOR: pBACe3.6

NEIGHBORING SEQUENCE INFORMATION:
The clone sequenced to the left is RP11-57J18; the clone sequenced
to the right is RP11-549G13. Actual start of this clone is at base
position 1 of RP11-297J22; actual end is at base position 183887 of
RP11-297J22.

RP11-297J22 contains a tandem repeat between bases 149996 to 150321
where there are low quality bases. Digest and pcr information
confirm the assembly.

There are polymorphisms between RP11-297J22 and RP11-549G13.

On or before Sep 4, 1997 this sequence version replaced gi:1766071,
gi:177380, gi:2289024.
Sequencing is completed to a minimum standard of double strand
coverage with a minimum of 2 clones and 2 reads with no ambiguities
or 2 chemistries with a minimum of 2 clones and 3 reads with no
ambiguities. If the sequence quality does not meet this standard,
it will be indicated in the annotation.

The repeat regions shown were identified using RepeatMasker by
Adrian Smit.

Sequence similarities were identified using Powerblast by Jinghui
Zhang.

Exon/Intron boundaries of identified genes were chosen if there
were canonical splice junctions that maintained sequence continuity
across the splice junctions.

Direct Submission
Submitted (12-JUN-1998) Genome Sequencing Center, Washington
University School of Medicine, 4444 Forest Park Parkway, St. Louis,
MO 63108, USA
On Aug 17, 2000 this sequence version replaced gi:3212937.

----- Genome Center -----
Center: Washington University Genome Sequencing Center
Center code: WUGSC
Web site:http://genome.wustl.edu/gsc/index.shtml
----- Project Information -----
Center project name: H RG045H05
----- Summary Statistics -----
Sequencing vector: M13; 100%
Sequencing vector: plasmid; 0%
Chemistry: Dye-primer ET; 71% of reads
Chemistry: Dye-terminator Big Dye; 29% of reads
Assembly program: Phrap; version 0.990319
Consensus quality: bases at least Q40
Consensus quality: bases at least Q30
Consensus quality: bases at least Q20
Insert size: 181000; agarose-fp
Insert size: 195258; sum-of-contigs
Quality coverage: in Q20 bases; agarose-fp
Quality coverage: in Q20 bases; sum-of-contigs
-----
* NOTE: This is a 'working draft' sequence. It currently
* consists of 18 contigs. The true order of the pieces
* is not known and their order in this sequence record is
* arbitrary. Gaps between the contigs are represented as
* runs of N, but the exact sizes of the gaps are unknown.
* This record will be updated with the finished sequence
* as soon as it is available and the accession number will
* be preserved.
* 1 5084: contig of 5084 bp in length
* 5085 5184: gap of unknown length
* 5185 14399: contig of 9215 bp in length
* 14400 14499: gap of unknown length
* 14500 22837 22936: contig of 8337 bp in length
* 22937 33373: contig of unknown length

JOURNAL
Rat Genome Sequencing Consortium.
Direct Submission
Submitted (15-NOV-2002) Human Genome Sequencing Center, Department
of Molecular and Human Genetics, Baylor College of Medicine, One
Baylor Plaza, Houston, TX 77030, USA
On Nov 15, 2002 this sequence version replaced gi:23269344.
The sequence in this assembly is a combination of BAC based reads
and whole genome shotgun sequencing reads assembled using Atlas
(http://www.hgsc.bcm.tmc.edu/projects/rat/). Each contig described
in the feature table below represents a scaffold in the Atlas
assembly (a 'contig-scaffold'). Within each contig-scaffold,
individual sequence contigs are ordered and oriented, and separated
by sized gaps filled with Ns to the estimated size. The sequence
may extend beyond the ends of the clone and there may be sequence
contigs within a contig-scaffold that consist entirely of whole
genome shotgun sequence reads. Both end sequences and whole genome
shotgun sequence only contigs will be indicated in the feature
table.

Web site: http://www.sanger.ac.uk
Contact: vega@sanger.ac.uk
-----
This sequence was finished as follows unless otherwise noted: all
regions were either double-stranded or sequenced with an alternate
chemistry or covered by high quality data (i.e., phred quality >=
30); an attempt was made to resolve all sequencing problems, such
as compressions and repeats; all regions were covered by at least
one subclone; and the assembly was confirmed by restriction digest,
except on the rare occasion of the clone being a YAC.
The following abbreviations are used to associate primary accession
numbers given in the feature table with their source databases:
Em, EMBL; Sw, SWISSPROT; Tr, TrEMBL; Wp, WormPEP; Information
on the WORMPEP database can be found at
http://www.sanger.ac.uk/Projects/C_elegans/wormpep
Sequence from the Mouse Genome Sequencing Consortium whole genome
shotgun may have been used to confirm this sequence. Sequence data
from the whole genome shotgun alone has only been used where it has
a phred quality of at least 30.
RP23-136M7 is from the RPCI-23 Mouse BAC Library
constructed by the group of Pieter de Jong.
For further details see http://www.chori.org/bacpac/home.htm

COMMENT

On May 10, 2003 this sequence version replaced gi:25009391.
 The sequence in this assembly is a combination of BAC based reads
 and whole genome shotgun sequencing reads assembled using Atlas
 (<http://www.hgsc.bcm.tmc.edu/projects/rat/>). Each contig described
 in the feature table below represents a scaffold in the Atlas
 assembly (a 'contig-scaffold'). Within each contig-scaffold,
 individual sequence contigs are ordered and oriented, and separated
 by sized gaps filled with Ns to the estimated size. The sequence
 may extend beyond the ends of the clone and there may be sequence

contigs within a contig-scaffold that consist entirely of whole
 genome shotgun sequence reads. Both end sequences and whole genome
 shotgun sequence only contigs will be indicated in the feature
 table.

 COMMENT
 The sequence in this assembly is a combination of BAC based reads
 and whole genome shotgun sequencing reads assembled using Atlas
 (http://www.hgsc.bcm.tmc.edu/projects/rat/). Each contig described
 in the feature table below represents a scaffold in the Atlas
 assembly (a 'contig-scaffold'). Within each contig-scaffold,
 individual sequence contigs are ordered and oriented, and separated
 by sized gaps filled with Ns to the estimated size. The sequence
 may extend beyond the ends of the clone and there may be sequence
 contigs within a contig-scaffold that consist entirely of whole

genome shotgun sequence reads. Both end sequences and whole genome
 shotgun sequence only contigs will be indicated in the feature
 table.

Rat Genome Sequencing Consortium.

Direct Submission

Submitted (21-SEP-2002) Human Genome Sequencing Center, Department

of Molecular and Human Genetics, Baylor College of Medicine, One

Baylor Plaza, Houston, TX 77030, USA

On Sep 21, 2002 this sequence version replaced gi:21735811.

The sequence in this assembly is a combination of BAC based reads

and whole genome shotgun sequencing reads assembled using Atlas

(<http://www.hgsc.bcm.tmc.edu/projects/rat/>). As a result, the

sequence may extend beyond the ends of the clone and there may be

contigs that consist entirely of whole genome shotgun sequence

reads. Both end sequences and whole genome shotgun sequence only

contigs will be indicated in the feature table.

 Direct Submission
 Submitted (08-OCT-2002) Human Genome Sequencing Center, Department
 of Molecular and Human Genetics, Baylor College of Medicine, One
 Baylor Plaza, Houston, TX 77030, USA
 On Sep 19, 2002 this sequence version replaced gi:21737862.
 The sequence in this assembly is a combination of BAC based reads
 and whole genome shotgun sequencing reads assembled using Atlas
 (<http://www.hgsc.bcm.tmc.edu/projects/rat/>). Each contig described
 in the feature table below represents a scaffold in the Atlas

assembly (a 'contig-scaffold'). Within each contig-scaffold, individual sequence contigs are ordered and oriented, and separated by sized gaps filled with Ns to the estimated size. The sequence may extend beyond the ends of the clone and there may be sequence contigs within a contig-scaffold that consist entirely of whole genome shotgun sequence reads. Both end sequences and whole genome shotgun sequence only contigs will be indicated in the feature table.
